

Synchrotron-based IR Reveals Heterogeneities in Zeolitic Catalysts

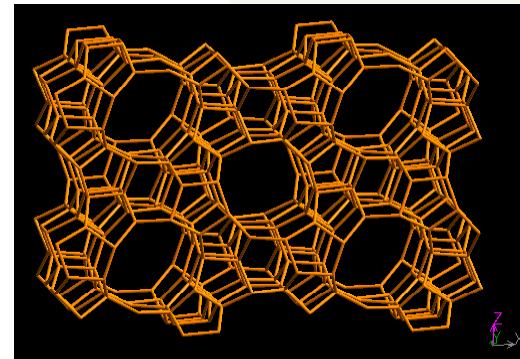

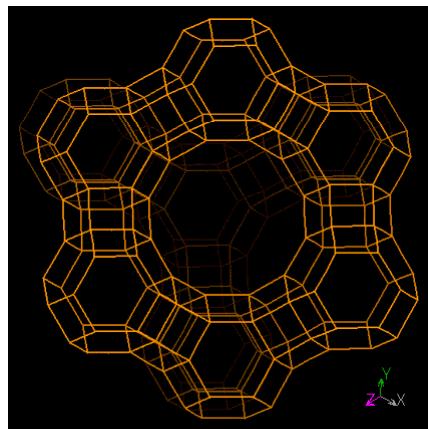

Javier Ruiz Martínez
Utrecht University

IR Workshop on Spectro-Microscopy, Basel
2nd February 2011

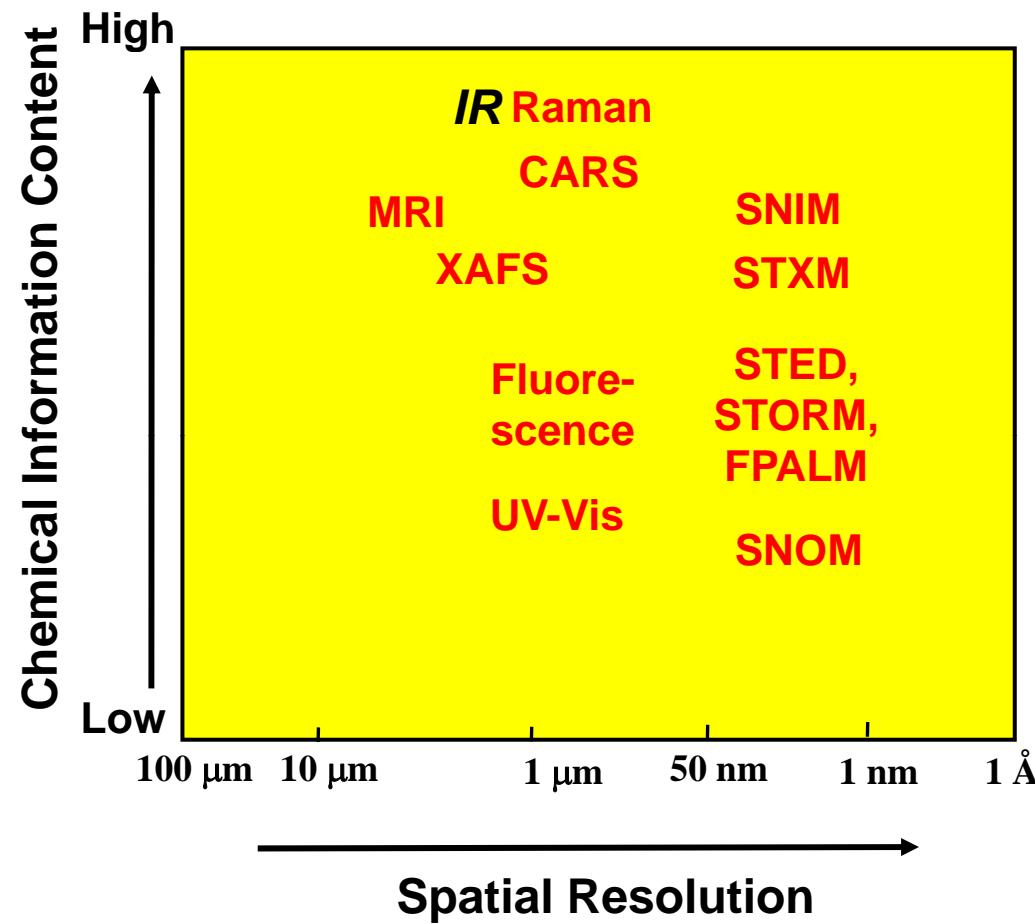

What are zeolites?

- Micropore aluminosilicate materials

- Applications in catalysis
 - Fluid catalytic cracking
 - Oligomerization of light olefins
 - Methanol to hydrocarbons
 - ...

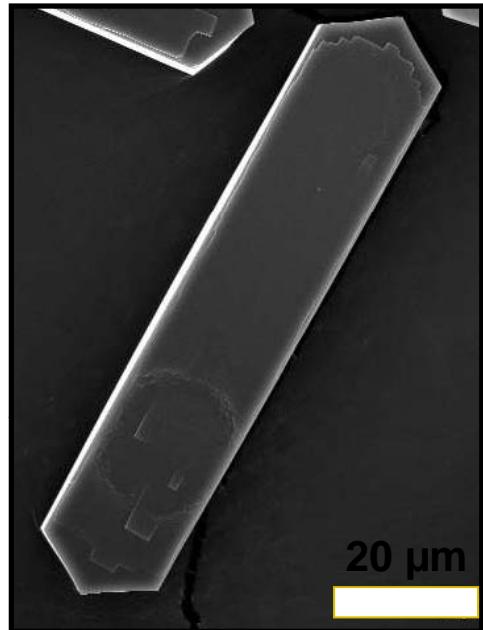

Chemical imaging of catalysts with photons: Techniques

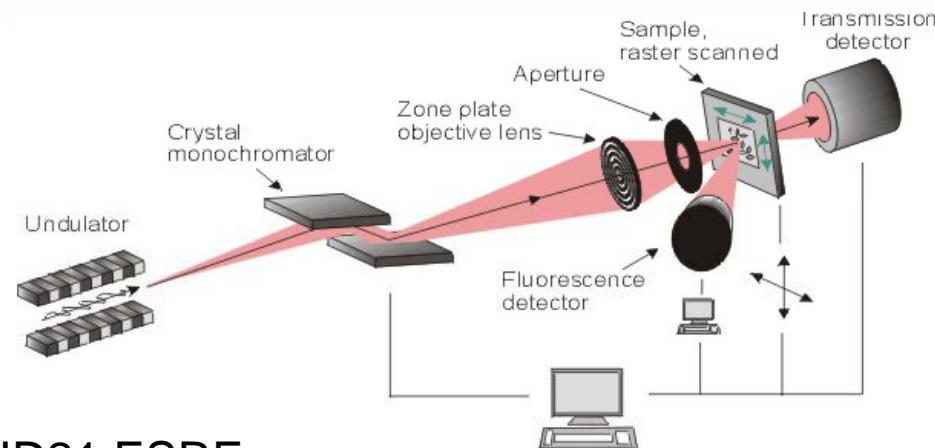

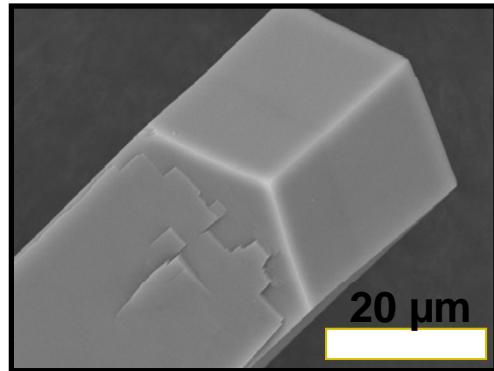

Heterogeneous catalysts are truly heterogeneous
They are spatially and temporally non-uniform and very dynamic!

Showcase: large H-ZSM-5 crystals

Universiteit Utrecht
