

SCIENCE USING IR SYNCHROTRON LIGHT
A USER'S PERSPECTIVE
Basel, 1-2 February 2011

IR Workshop on Spectro-Microscopy

Synchrotron IR Microspectroscopy:

A powerful tool for Polymer Science

Gary Ellis

Institute of Polymer Science and Technology
CSIC, Madrid, SPAIN

Outline

- Introduction
 - *Microscopic imaging in polymeric materials*
 - *The synchrotron IR microspectroscopy advantage*
- Some examples in polymeric materials
 - *Heterogeneous polymer systems*
- Future developments
 - *Wider, smaller & faster!*
- Conclusions
- Acknowledgements

Gary Ellis

"Synchrotron IR Microspectroscopy:
A powerful tool for Polymer Science."

CSIC

Introduction

- Polymers in everyday life

- 🧸 Essential for almost all our daily needs

- 🦆 Playing with polymers

- 🛑 Safety and Polymers

- Polymers are fine when they work...

- ❑ But when they don't...

- ❑ *Example Problem: Paintwork on cars*

Gary Ellis

"Synchrotron IR Microspectroscopy:
A powerful tool for Polymer Science."

CSIC

Cross-section of a car bumper / fender

varnish / lacquer

black paint

matrix polymer

POLARIZED OPTICAL MICROSCOPY

Gary Ellis

"Synchrotron IR Microspectroscopy:
A powerful tool for Polymer Science."

CSIC

How do we solve these problems?

- Almost all polymeric materials are “heterophase”
- Need for understanding and control the following parameters:
 - ❑ COMPOSITION
 - ❑ STRUCTURE
 - ❑ MORPHOLOGY
 - ❑ ORIENTATION
- Materials design
 - ❑ Control of “Architecture”
 - ❑ MODIFICATION
- CONTROL OF PROPERTIES

TYPES OF
HETEROGENEITY

CARACTERIZATION
OF DOMAINS

MICROSCOPY

Gary Ellis

“Synchrotron IR Microspectroscopy:
A powerful tool for Polymer Science.”

CSIC

Tools for microscopic imaging

Gary Ellis
 "Synchrotron IR Microspectroscopy:
 A powerful tool for Polymer Science."

CSIC

Why infrared?

■ IR spectroscopy

- Powerful molecular characterization technique
- High information content
- Non-destructive
- Versatile sampling
- Well-understood

■ IR microspectroscopy

- Spatially resolved spectra
- Small sample / small volume analysis
- Chemical and structural mapping

Infrared microspectroscopy has been around for some time....

Gary Ellis

"Synchrotron IR Microspectroscopy:
A powerful tool for Polymer Science."

CSIC

Aperture-limited domain characterization

(Pixel size)

Example: Polymer blend

Coalescence and phase inversion

PLM

Aperture 6 x 6 μm (oversampled 3 x 3 μm)

Synchrotron source required!

Gary Ellis

"Synchrotron IR Microspectroscopy:
A powerful tool for Polymer Science."

CSIC

Synchrotron IR microspectroscopy

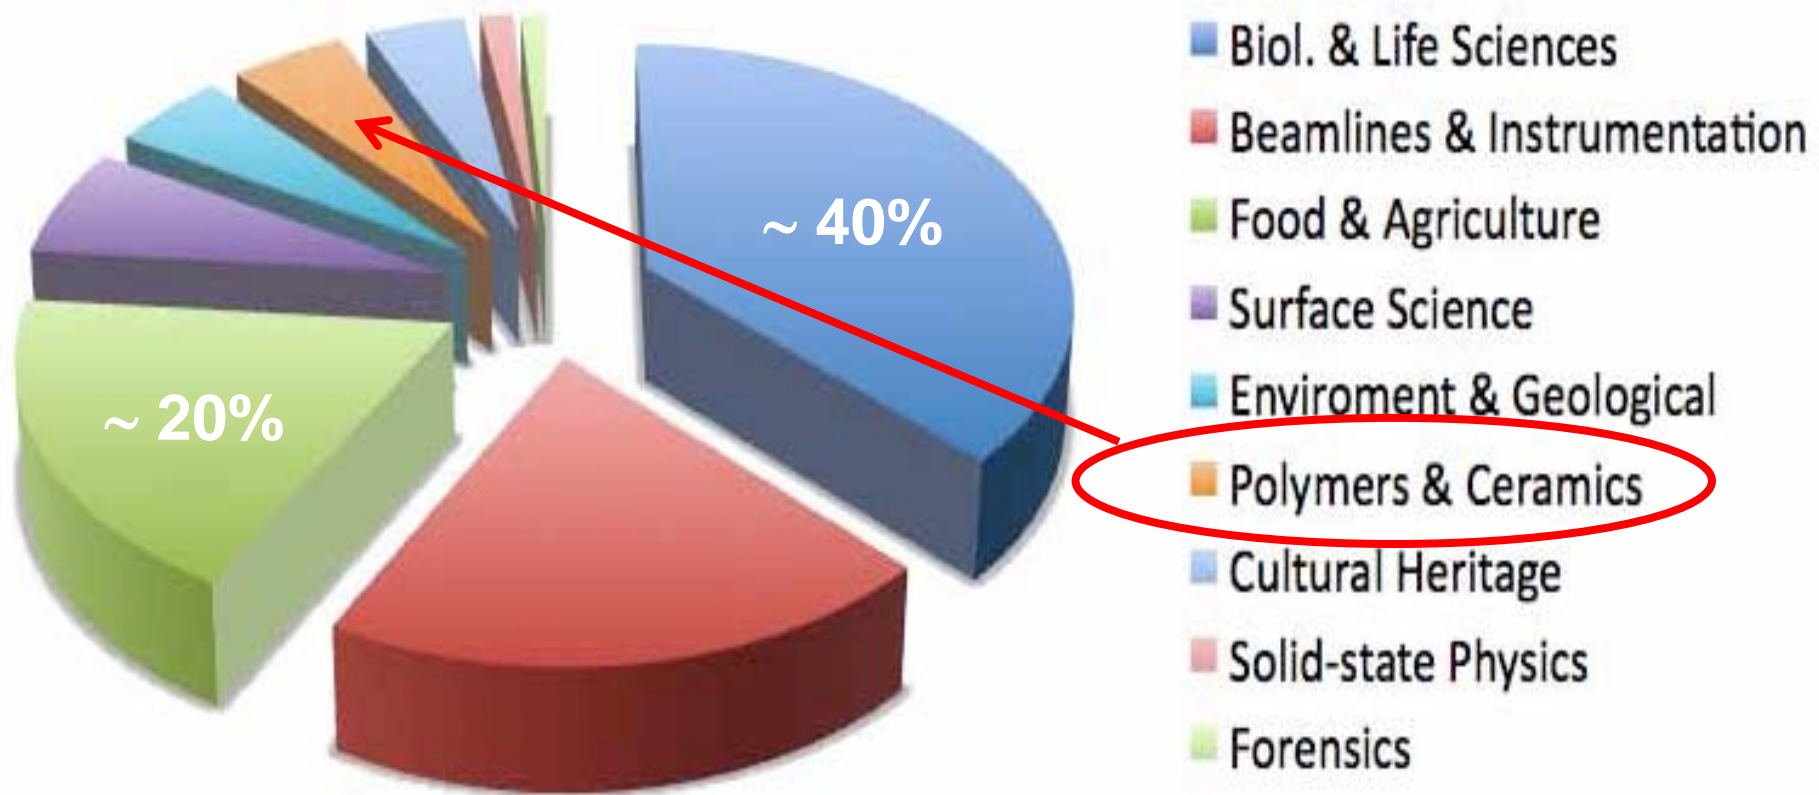

Gary Ellis

"Synchrotron IR Microspectroscopy:
A powerful tool for Polymer Science."

CSIC

Multidisciplinary Scientific Impact

Last 270 SCI publications (to 2008)

Gary Ellis

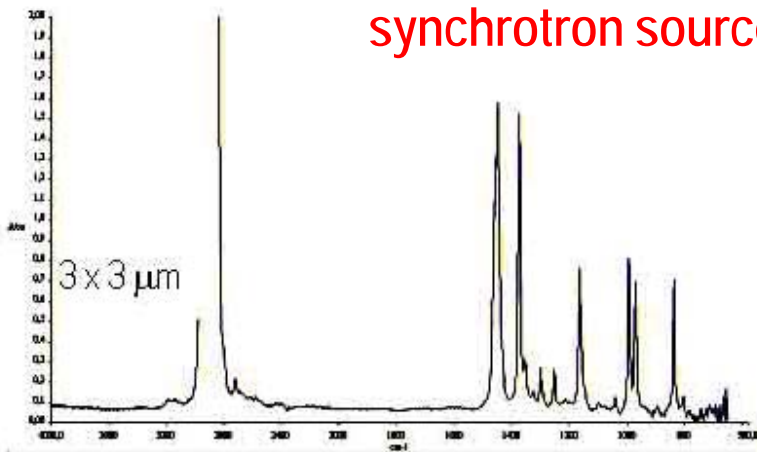

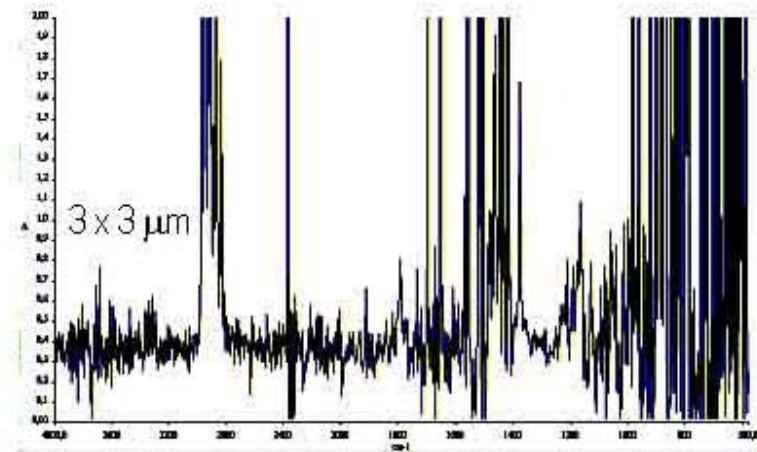

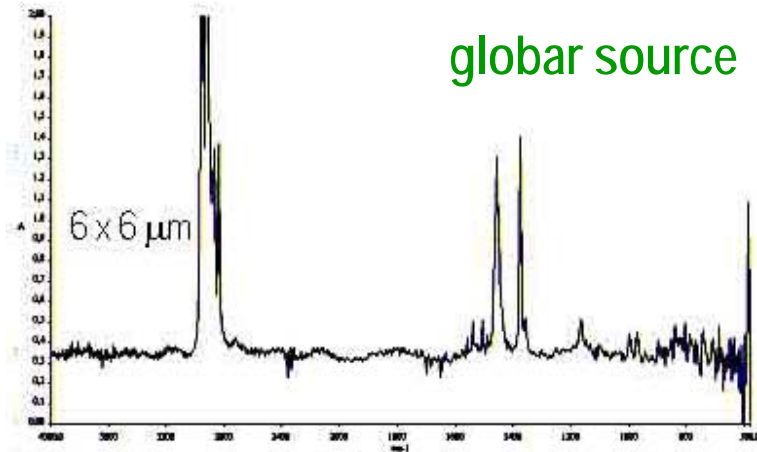

"Synchrotron IR Microspectroscopy:
A powerful tool for Polymer Science."

CSIC

It works for polymers too...

ISOTHERMALLY CRYSTALLISED POLYPROPYLENE FILM

Gary Ellis

"Synchrotron IR Microspectroscopy:

Polymorfism: Isotactic Polypropylene

Colaborators

Carlo MARCO

Gonzalo SANTORO

■ α (monoclinic)

- ❑ Crystallization from the melt
- ❑ $T_m = 170 - 180^\circ\text{C}$

■ β (trigonal)

- ❑ Crystallization under shear, temperature gradients or nucleating agents
- ❑ $T_m = 155^\circ\text{C}$

■ γ (triclinic)

- ❑ Crystallization under pressure

■ δ (smectic)

- ❑ Low order and crystallinity

Conformation $3_1 (TG)_3$

CSIC

Biodegradable polymer substrates

■ Copolymers PHBHV (Hydroxybutyrate-hydroxyvalerate)

- Supports for cell growth
 - eg. *Mesenchymal* stem cells, urethral cells, etc.
- Tissue therapy (e.g. skin repair)
- Diverse preparative strategies to promote cell adhesion and growth
 - Chemical modification
 - Plasma modification
 - Laser perforation
- Design of localized heterogeneities
 - Polarity
 - Hydrophobic/hydrophilic interactions
 - Directional cell propagation

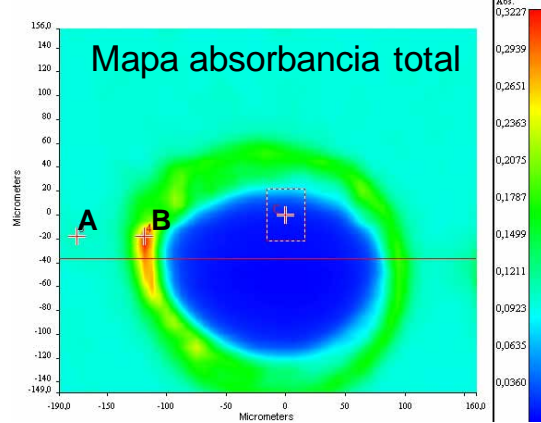

Gary Ellis

"Synchrotron IR Microspectroscopy:
A powerful tool for Polymer Science."

CSIC

Laser microperforated PHBHV

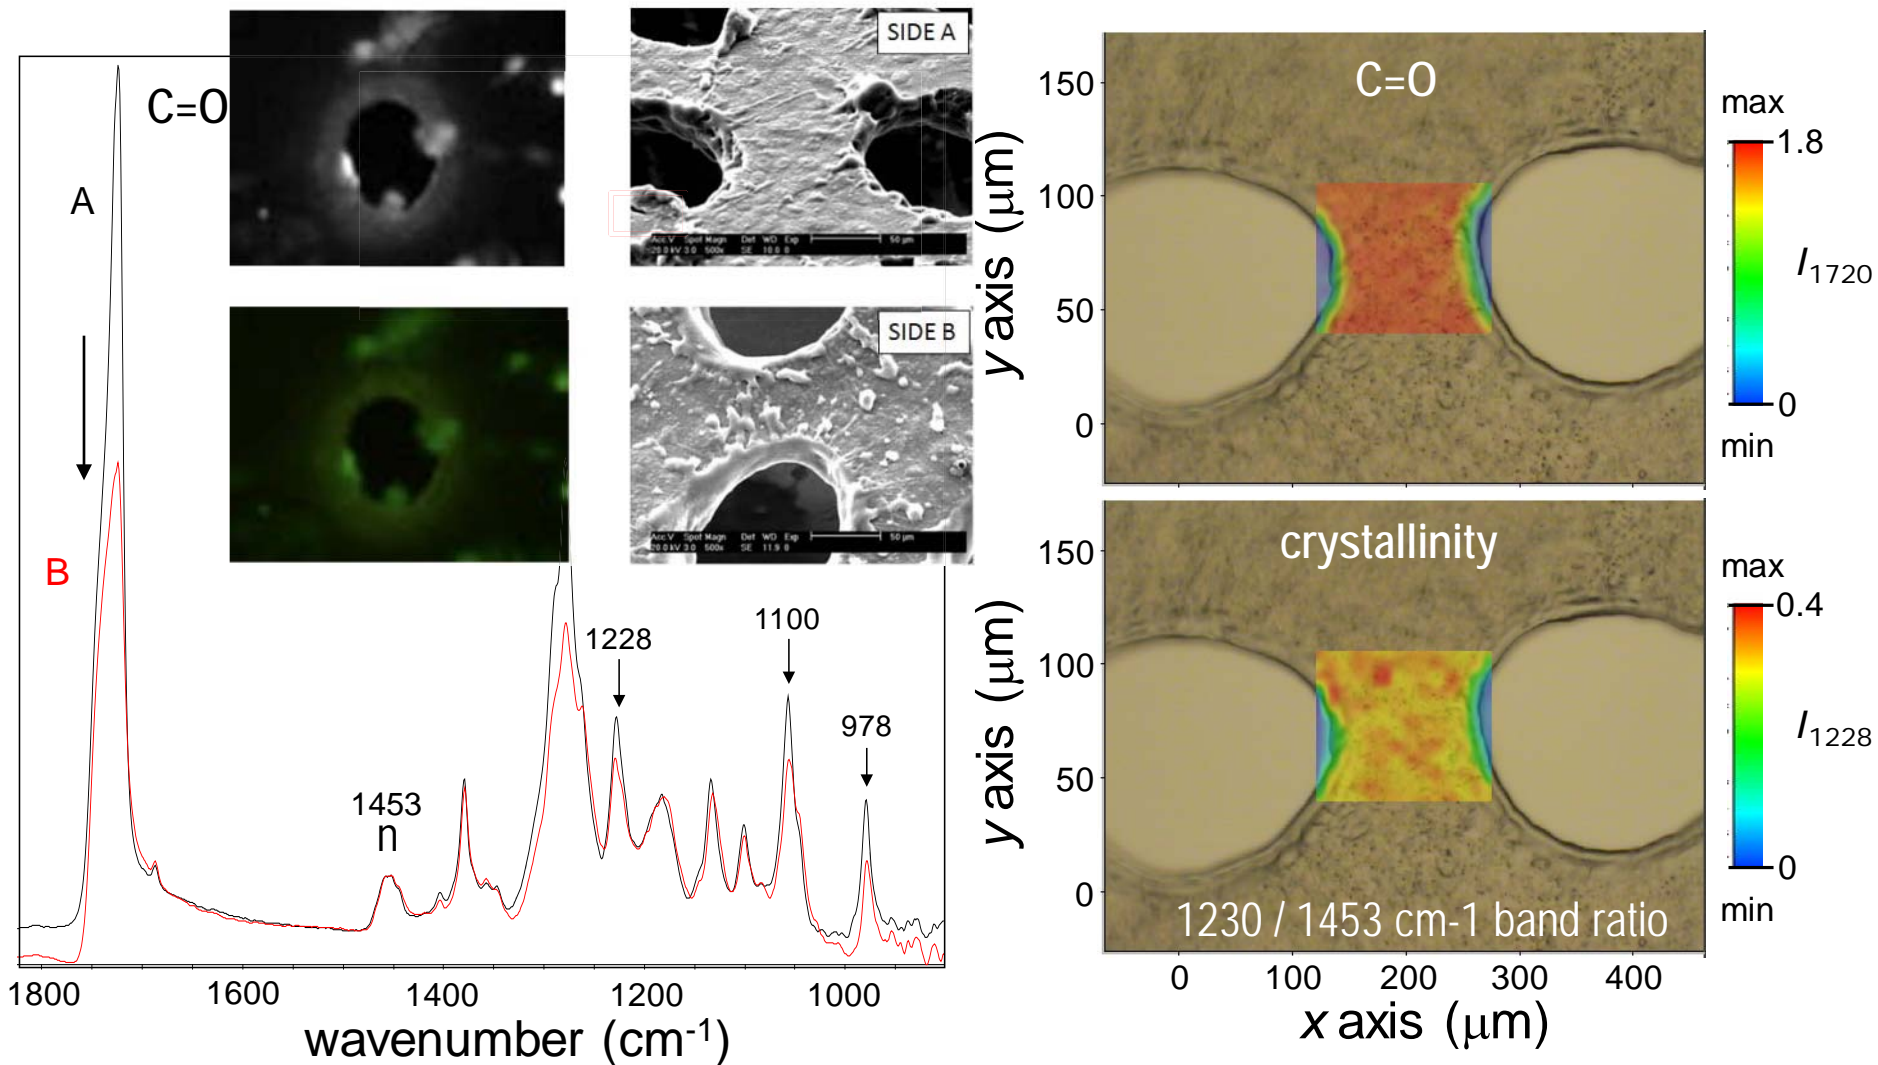

from Serrano *et al.*, *Biomateriales* 2007, 28, 650
and Ellis *et al.*, *Anal. Bioanal. Chem.* 2011

A powerful tool for Polymer Science."

CSIC

Craze initiation in drawn PET

DICROISMO

$$D = A_{\parallel} / A_{\perp}$$

STRUCTURAL FACTOR

$$S = (A_{\parallel} + 2A_{\perp}) / 3$$

Aperture: $4 \times 4 \mu\text{m}^2$; step $1 \mu\text{m}$; 256 scans
 Natural polarisation of BMR

Gary Ellis
 "Synchrotron IR Microspectroscopy:
 A powerful tool for Polymer Science."

CSIC

Future Developments (partial “wish list”)

- Wider!
 - *Far-infrared and terahertz regions*
- Smaller!
 - *ATR imaging microspectroscopy*
 - *Near-field techniques*
- Faster!
 - *Coupling to bidimensional arrays*

Gary Ellis

*“Synchrotron IR Microspectroscopy:
A powerful tool for Polymer Science.”*

CSIC

Smaller!

ATR IMAGING MICROSPECTROSCOPY

e.g. Germanium ATR crystal ($n_1 = 4.0$)
Polymer sample ($n_2 = 1.5$)

$$d_p = \frac{\lambda}{2\pi n_1 \left(\sin^2 \theta - \frac{n_2^2}{n_1^2} \right)^{1/2}}$$

BETTER THAN $\lambda / 5$

	4000	3000	2000	1500	1000	650	cm ⁻¹
λ	2.5	3.3	5.0	6.7	10	15	μm
$\lambda/2$	1.2	1.7	2.5	3.4	5	7.5	SR
$\lambda/5$	0.4	0.6	0.9	1.2	1.8	2.6	ATR

Laser microperforated PHBHV copolymer

- Supports for cell growth
- Tissue therapy (repair)

ATR IMAGING MICROSPECTROSCOPY

- Higher surface amorphicity
- Higher hydrophilicity observed
- Improved cell adhesion

Hydrophilicity \uparrow

Gary Ellis

"Synchrotron IR Microspectroscopy:
A powerful tool for Polymer Science."

CSIC

Conclusions

- SIRmS is a powerful and versatile chemical and structural imaging tool for polymer scientists
- Diffraction-limited spectroscopy available and sub-micron imaging to come...
- **If you haven't tried it yet...**

JUST DO IT!
