HELIPORT - A Potential Platform for Running Digital Twins FAIRly

Tuesday, 11 May 2021 16:25 (15 minutes)

This presentation introduces the HELIPORT project, which aims at developing a platform which accommodates the complete life cycle of a scientific project and links all corresponding programs, systems and workflows to create a more FAIR and comprehensible project description. Heliport is linked with our local Handle-Server and generates uniform PIDs from and for various systems and services. With the integration of the Handle system (handle.net) Heliport can support digital twins.

Presenter: KNODEL, Oliver (HZDR)

Session Classification: Digital Twinning
