HighNess

A McStas Simulation Framework for Nested Mirror Optics *Method and Applications*

Workshop on Neutron Focusing Optics – NFO

Richard Wagner, ILL - 02.03.2023

PSI, Villigen

HighNESS is funded by the European Union Framework Programme for Research and Innovation Horizon 2020, under grant agreement 951782

HighNess

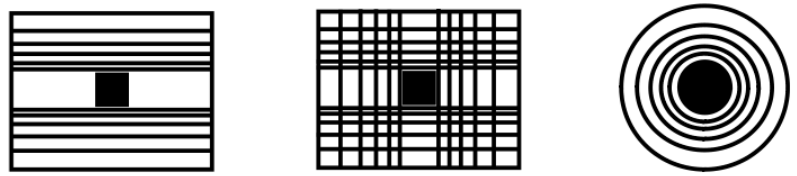
Outline

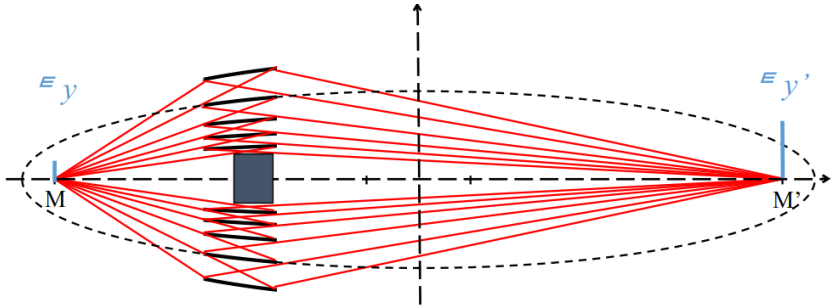
- Nested Mirror Optics
- McStas Components
- Applications
  - NNBAR
  - In-Beam UCN Source

HighNess

Nested Mirror Optics - NMO

- Elliptical guide: possible architecture to transport neutrons diverging from a source to a detector (sample)
- Elliptical shaped mirror - has the property to reflect a beam that emanates from one of its focal points directly to the other one
- The layers of several guides can be nested to build up a spatial tight optical component
  → Focusing reflector in (compact) nested arrangement
- Elliptical mirrors in planar or cylindrical arrangement possible
- Verify & quantify performance of these optical systems in McStas Simulations

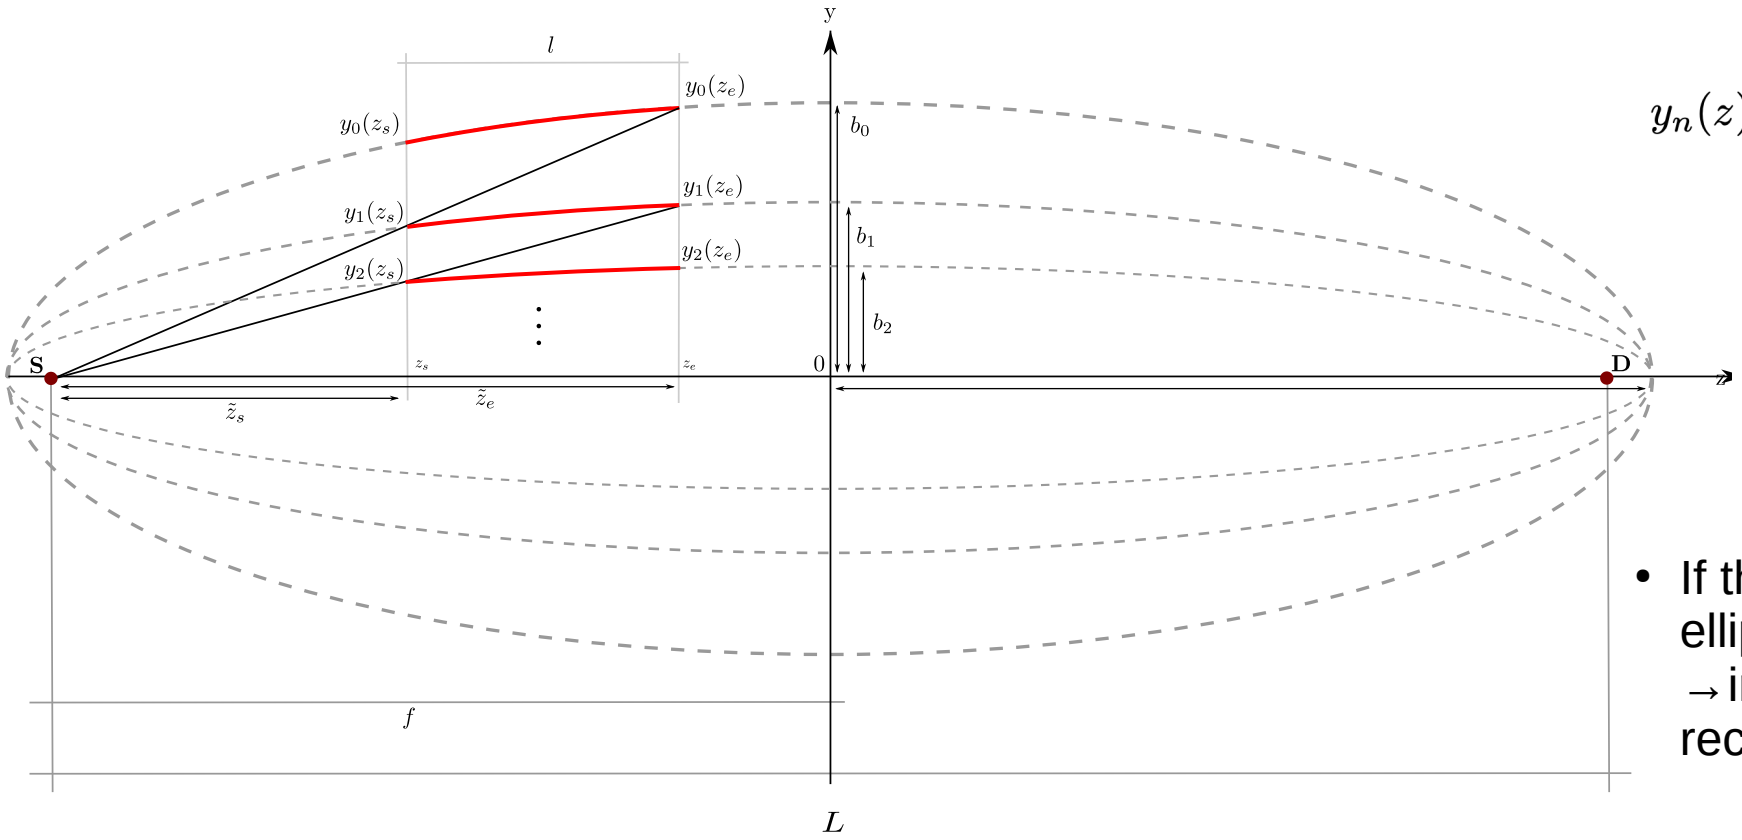




McStas

O.Zimmer, arXiv:1611.07353
Journal of Neutron Research 20 (2018) 91-98

Nested optic
Construction principle



$$y_n(z) = \sqrt{\left(1 - \frac{z^2}{f^2 + b_n^2}\right) \cdot b_n^2}$$

$$y_n(z_s) = \frac{\tilde{z}_s}{\tilde{z}_e} y_{n-1}(z_e)$$

- If the outer layer of a nested elliptical guide is given,
  → inner layers can be recursively constructed

McStas component

- *Guide_anyshape.instr*
- Constitutes a reflecting surface of arbitrary shape defined by an OFF-File
- Reflectivity parametrized by R_0,Q_c,α,W,m

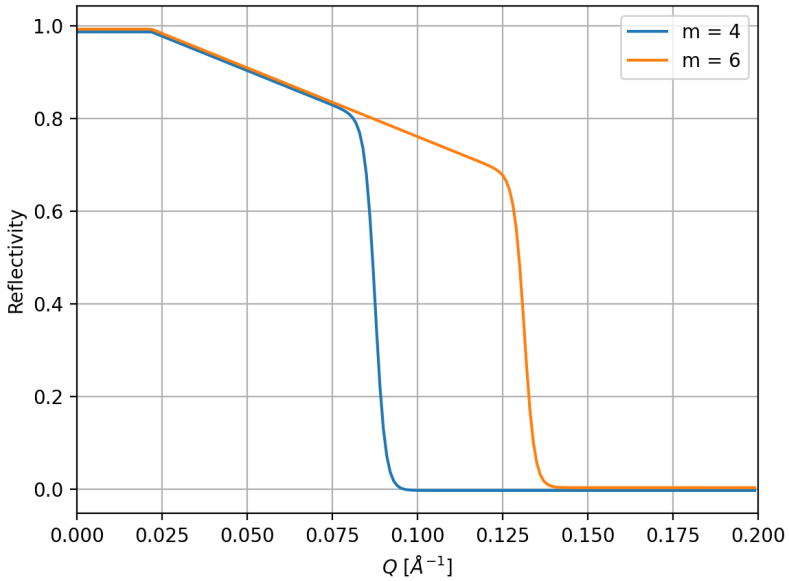


Table 1: Input parameters for the `Guide_anyshape` component

Parameter	Description
geometry	name of the OFF-file that defines the geometry of the optic
m	m-value of the optics material (zero is completely absorbing)

HighNess

OFF(object file format)-Files

```
1   OFF
2   # A cube of size 1x1x1 centred
3   8 6 0
4   -0.500000 -0.500000  0.500000
5   0.500000 -0.50000   0.500000

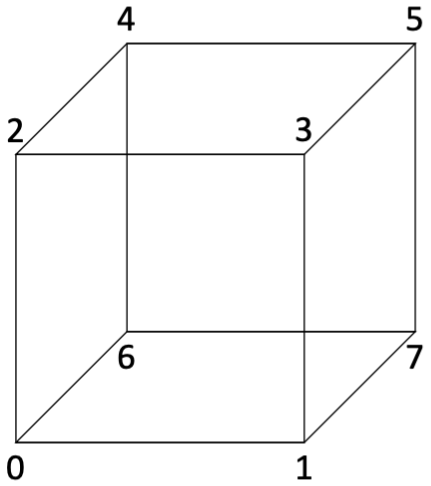
```



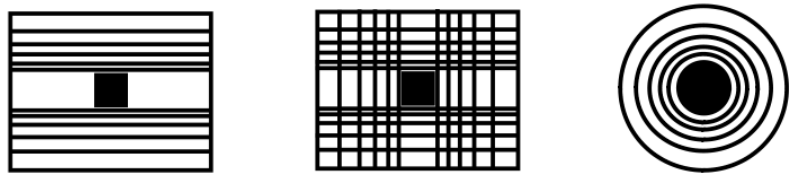
Example of an OFF-File describing a cube of side length one and its representation

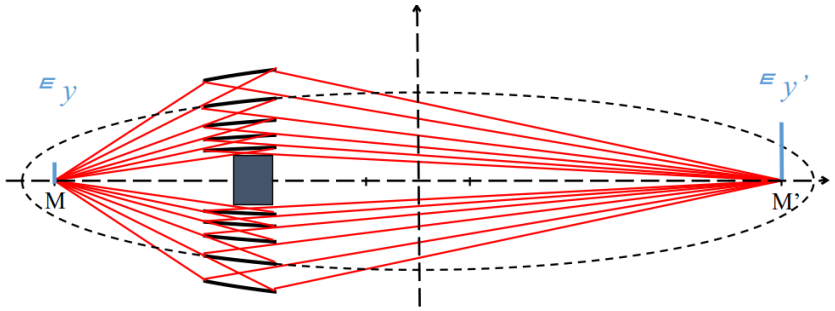
NMO - component creation library

- **Collection of Python functions for OFF File Generation of Nested Mirror Optics**
- Example

Table 5: Input parameters for the `createToroidalNestedOFFwArray()` function

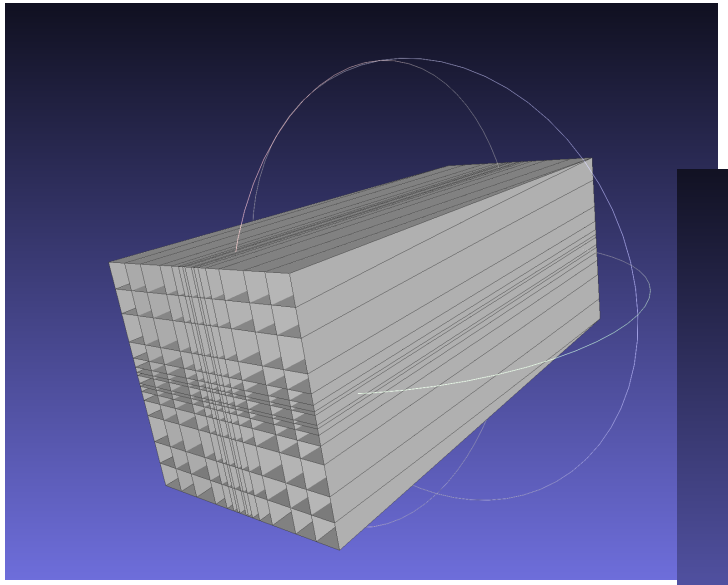
Parameter	Description
L	distance between focal points of the ellipses
b_array	array containing the minor axes of the nested ellipses
z_start	starting point of the optic, relative to the focal point
l	length of the optic
nb_segments	number of segments by which the ellipses are approximated
nb_segments_T	number of segments the circumferences of the toroidal sections are approximated with
filename	name of the generated OFF-file
opticHalfWidth	limit for extent of the optic. The area the optic can occupy is between $\pm$ `opticHalfWidth`
bBoundingBox	outer level is surrounded by a bounding box (true/false)

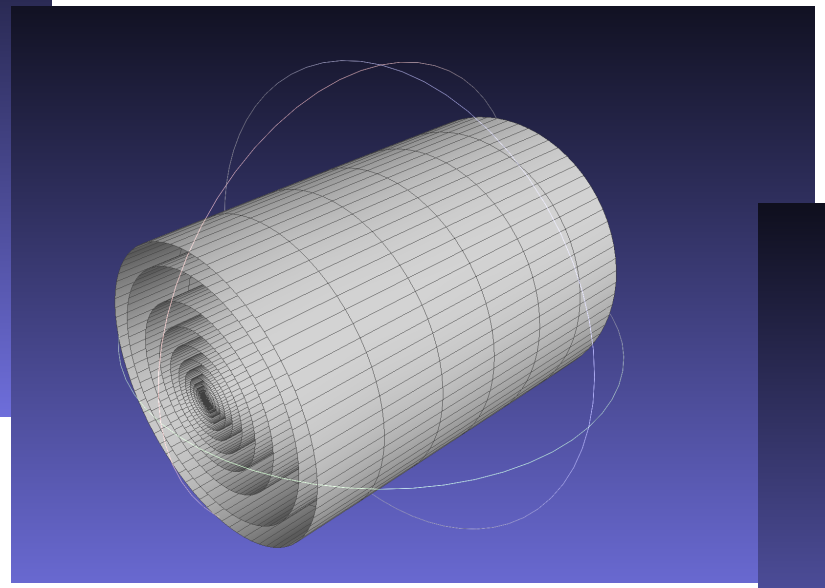


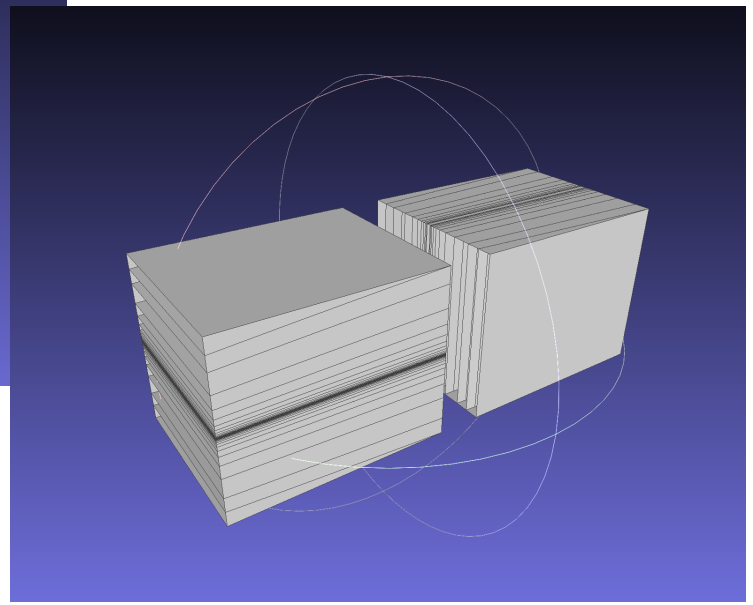


HighNess

Example NMOs: Elliptical Guides







Example NMOs: Wolter optics (type I)

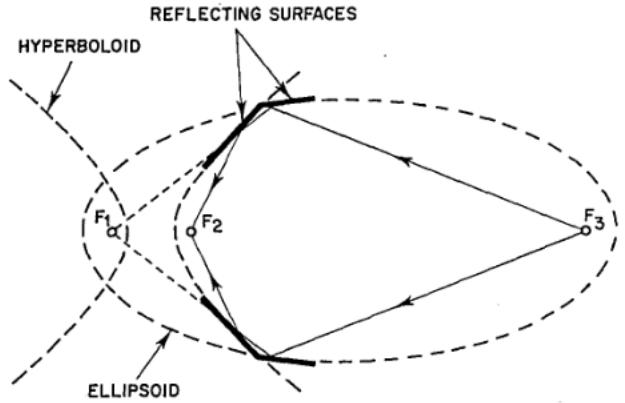


Fig. 1. Schematic representation of the ellipsoid–hyperboloid mirror. A source at one focus of the ellipsoid (F_3) is imaged at the focus of the hyperboloid (F_2) after two reflections.

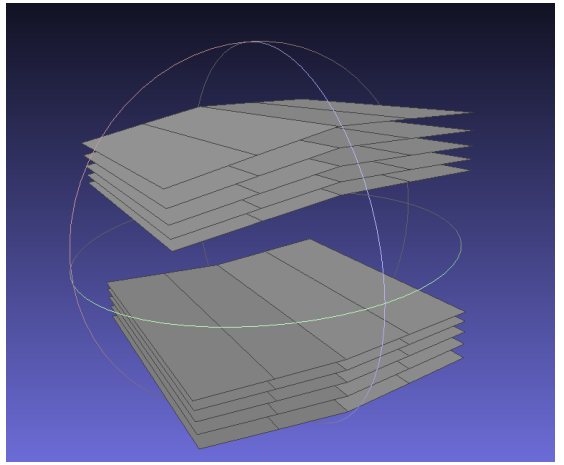
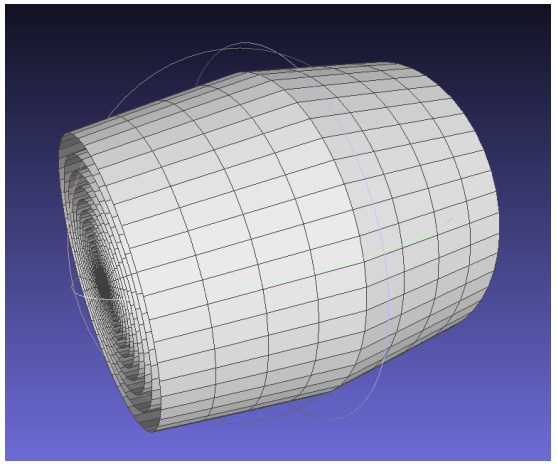
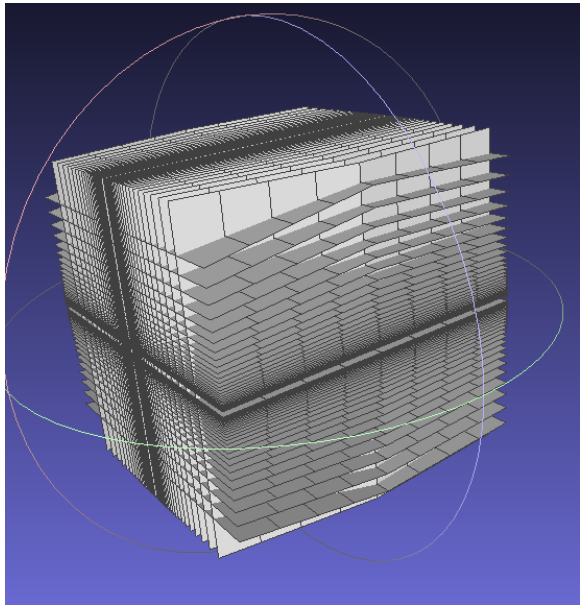
From: R. C. Chase and J. K. Silk, Appl. Opt. 14, 2096-2098 (1975)

- Hyperboloid and ellipsoid segment
- Design fulfills the Abbé sine condition in good approximation
- Produce sharp and aberration free images.



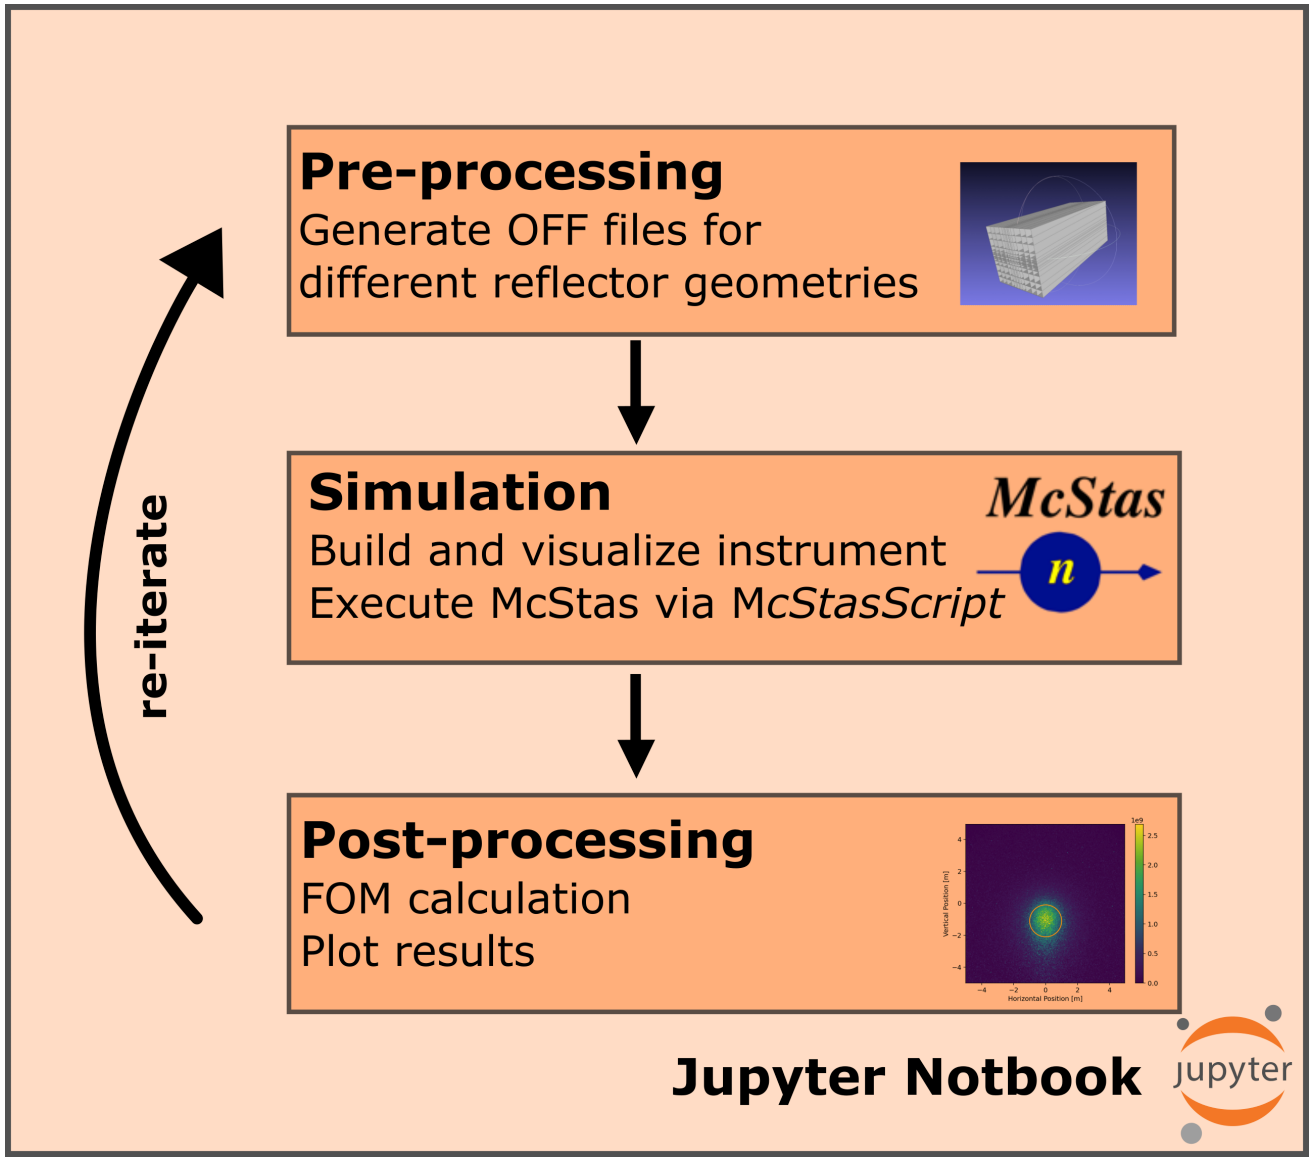




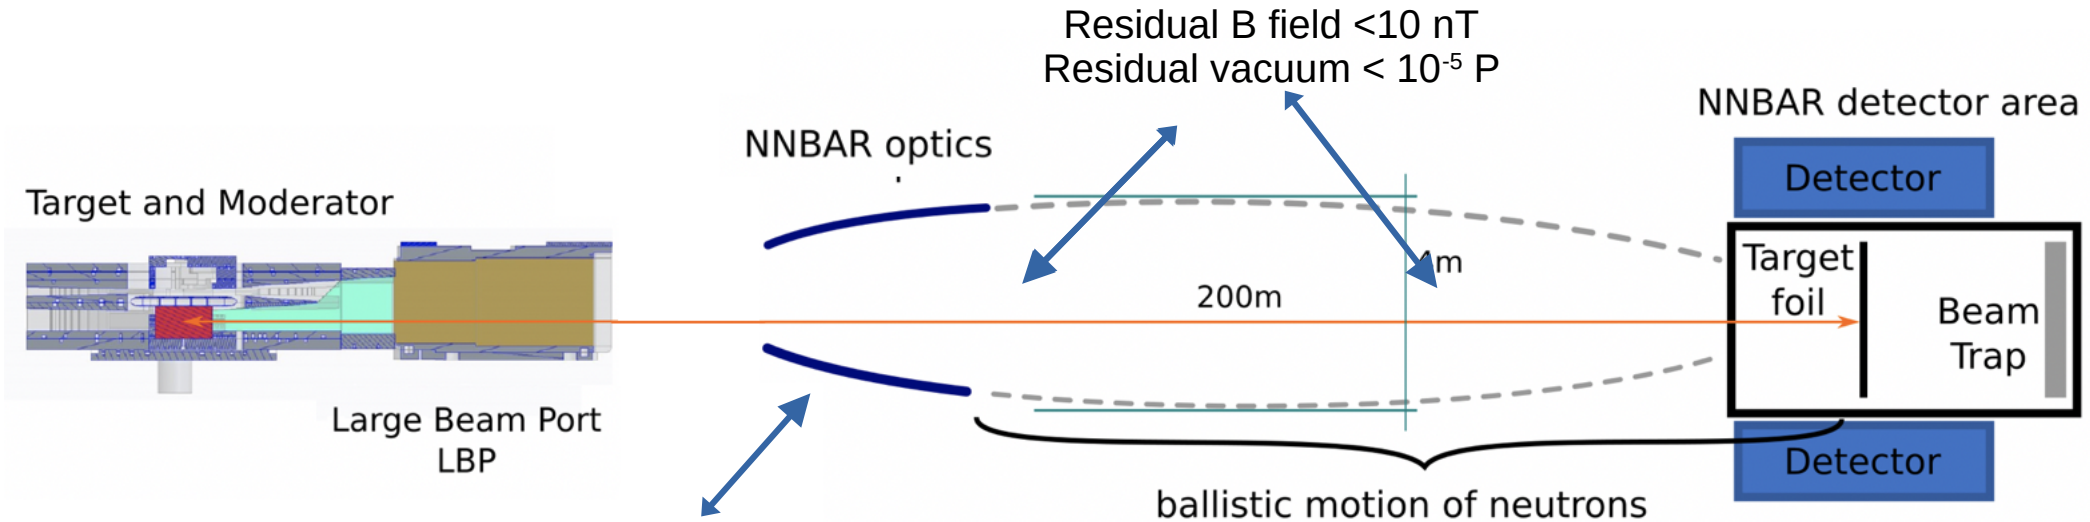
- Library extended to create Wolter NMOs

HighNess

Simulation process



Application Example
NNBAR Experiment at ESS



Reflector Optics
collect large solid angle of emitted neutrons and re-focus to detector area (start at ~10m)

free from perturbing
magnetic stray fields, interaction with walls
and ambient gas particles

Transition probability
for quasi free condition

t … uninterrupted flight time
τ … free oscillation time

$$P_{n\bar{n}} = \left(\frac{t}{\tau}\right)^2$$

Figure of Merit - FOM

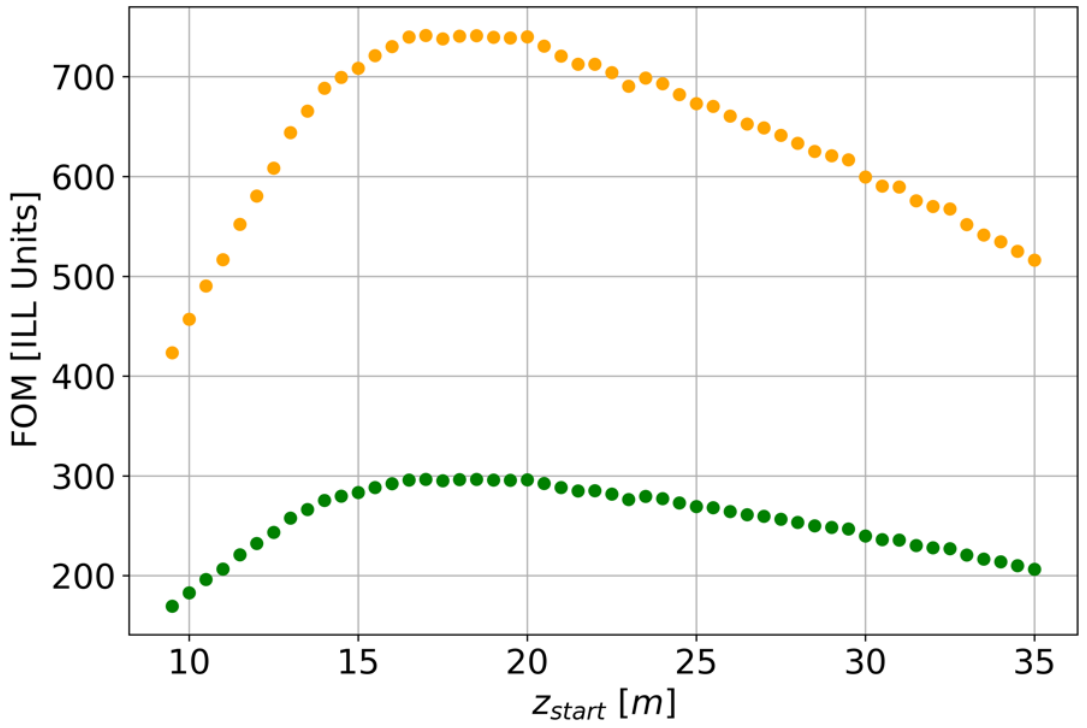
$$FOM = \sum_i \overbrace{N_i}^{\text{neutrons}} * \overbrace{t_i^2}^{\text{(uninterrupted) flight time}} / \underbrace{(4 \times 10^9)}_{\text{normalization factor}}$$

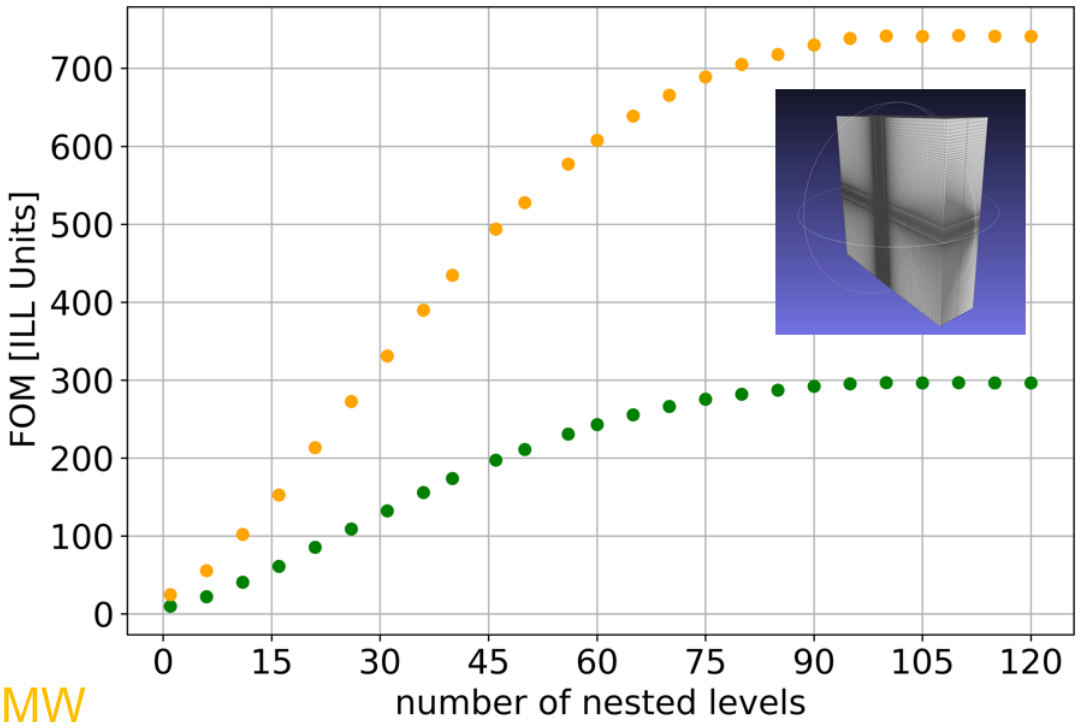
HighNess

Application Example
NNBAR Experiment at ESS

Find the optimum optic by varying parameters
(e.g. starting point, # of nested levels, ...)

Example: Simulations for a 1m long nested Reflector



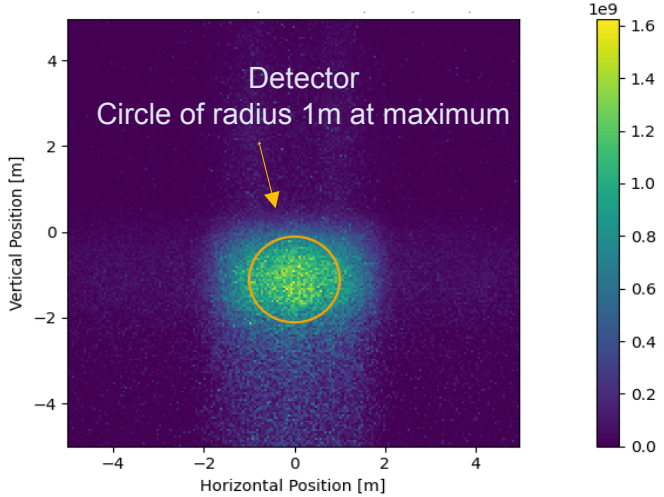


5 MW
2 MW

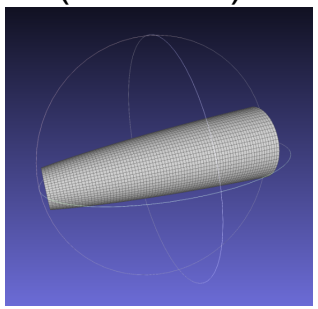
HighNess

Application Example
NNBAR Experiment at ESS

Example: Simulations for a 10m Nested Reflector

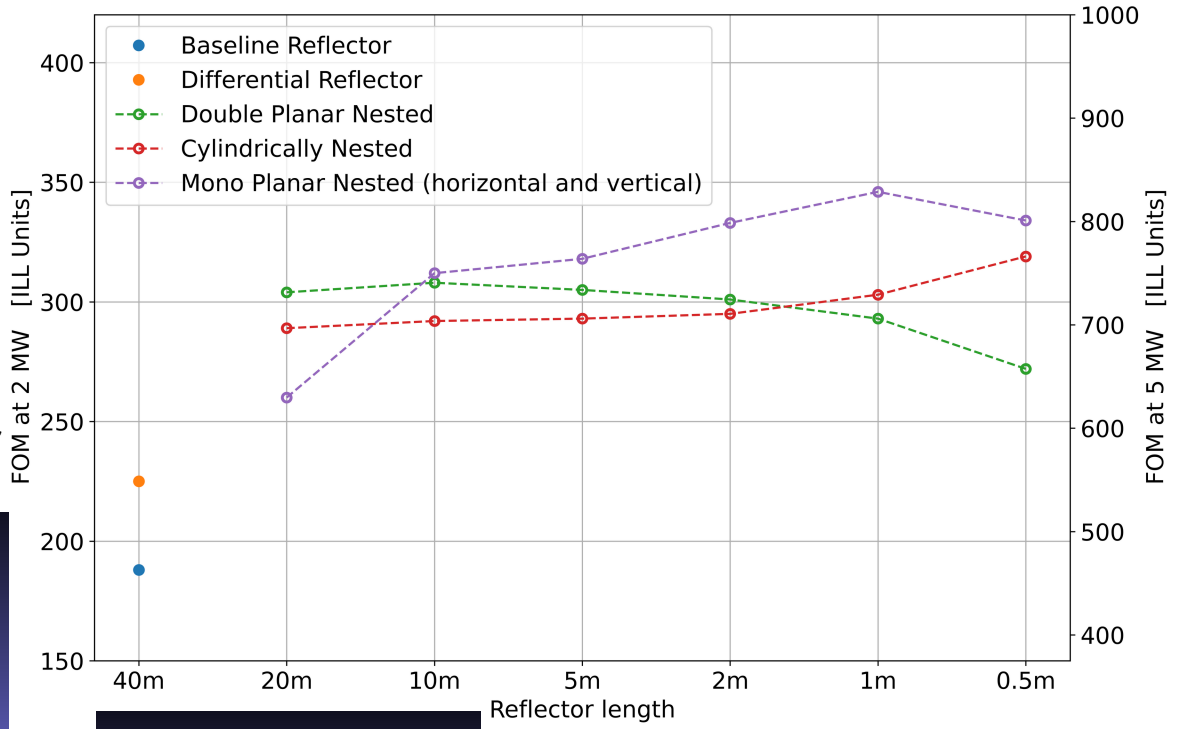


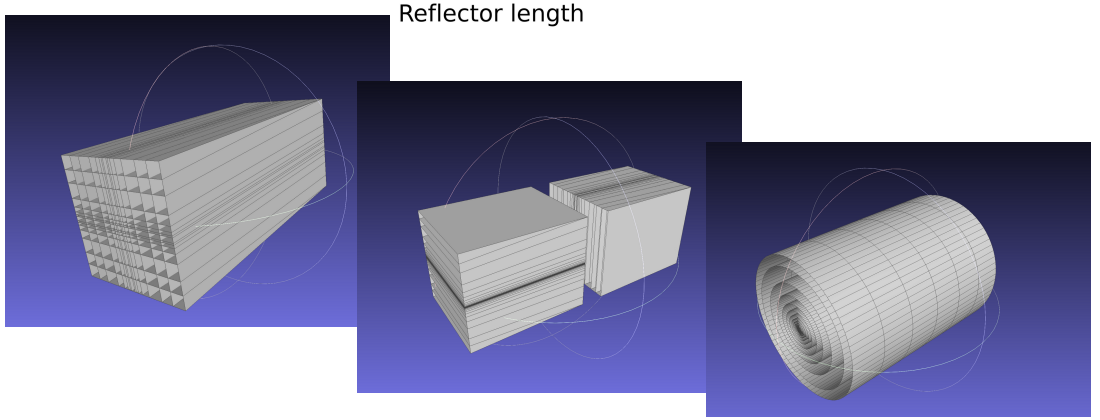
40m single layer (baseline)



FOM: 308 (nested levels=13, 2 MW)

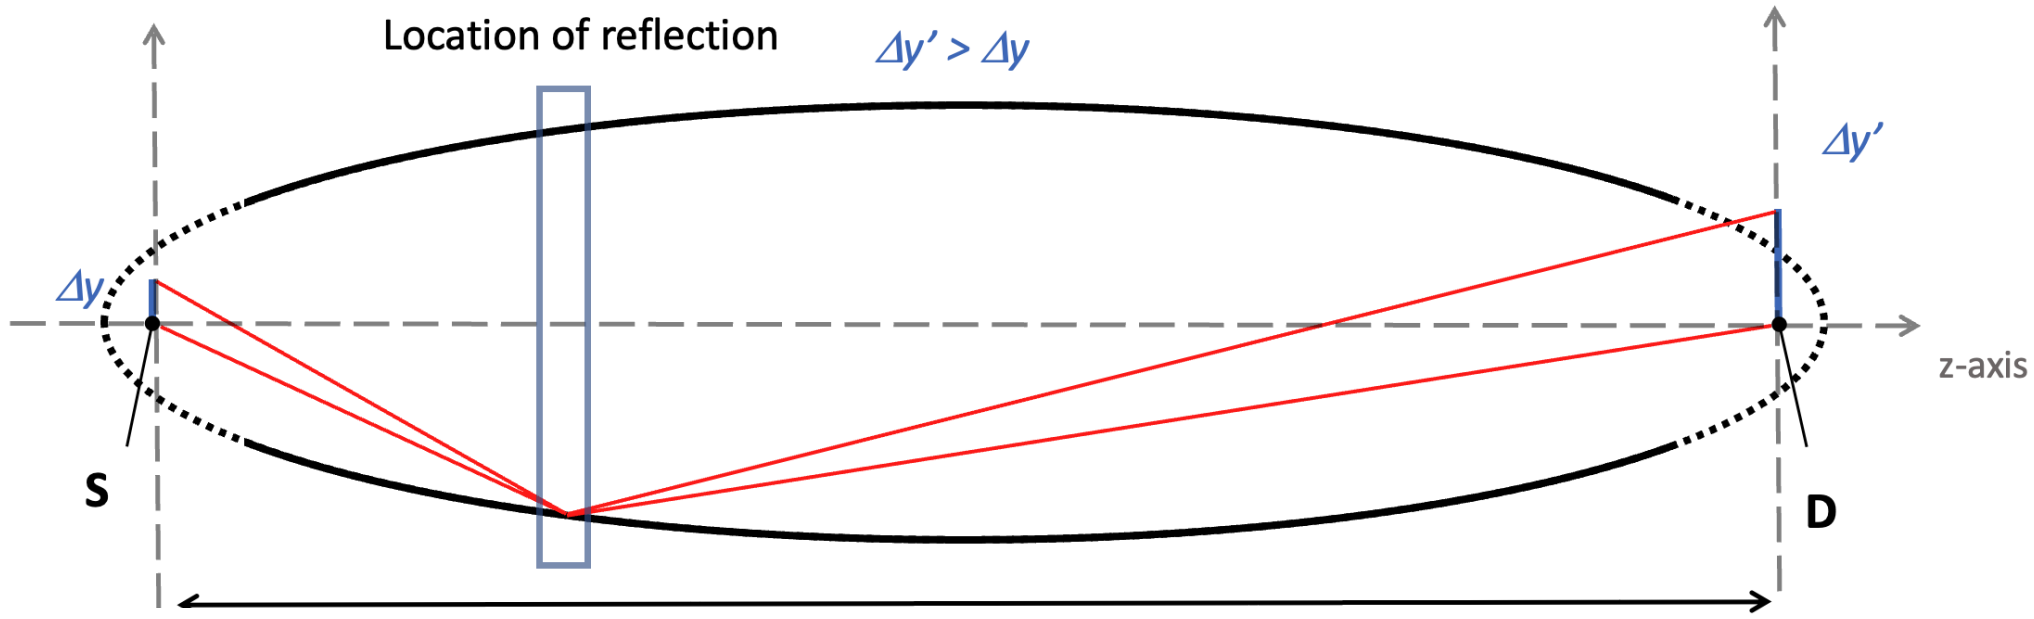
Collected results for different reflector systems





HighNess

Off-Axis magnification for an elliptical reflector



$$\Delta y = \frac{L-z}{z}\Delta y'$$

$$M = \Delta y/\Delta y' = \frac{L-z}{z}$$

Examples:

L = 200, z = 10 -> M = 19

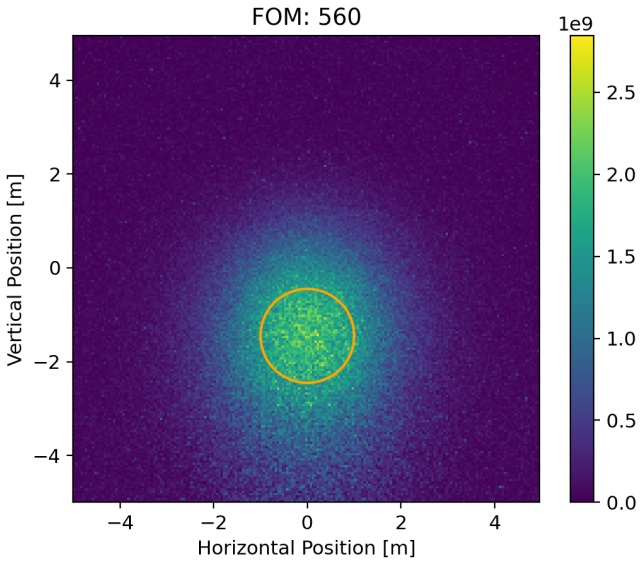
L = 200, z = 20 -> M = 9

L = 200, z = 100 -> M = 1

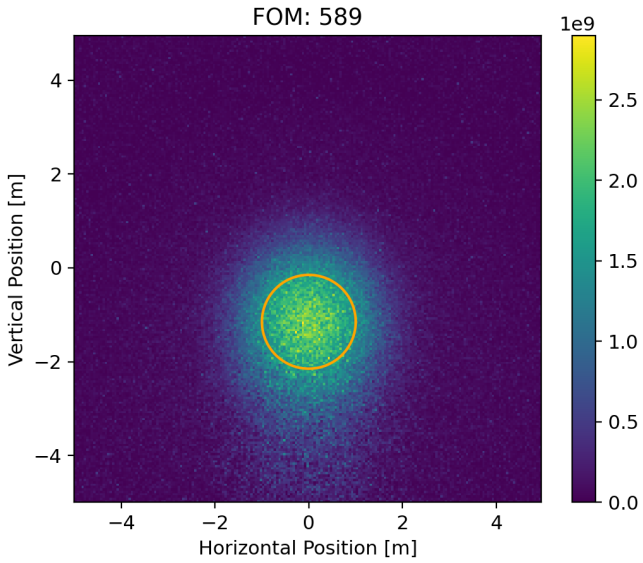
HighNess

NNBAR: cylindrical, 10m, 4 levels (5MW)
Start of reflector: 10m, 15m, 20m

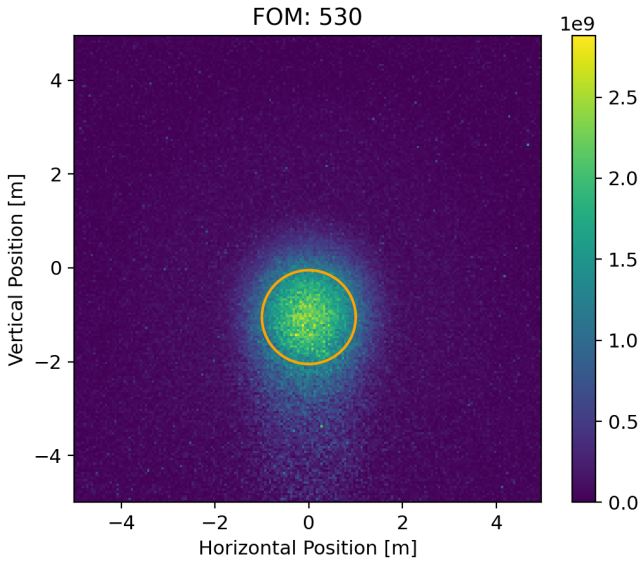
10m



15m



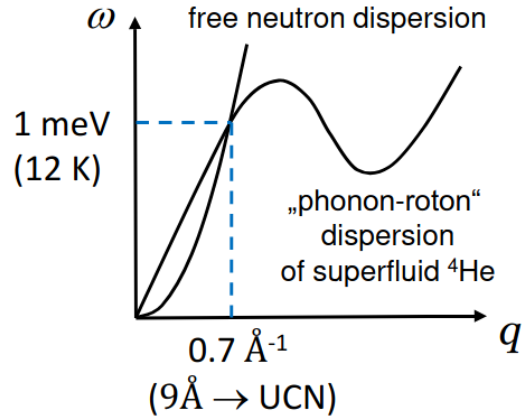
20m

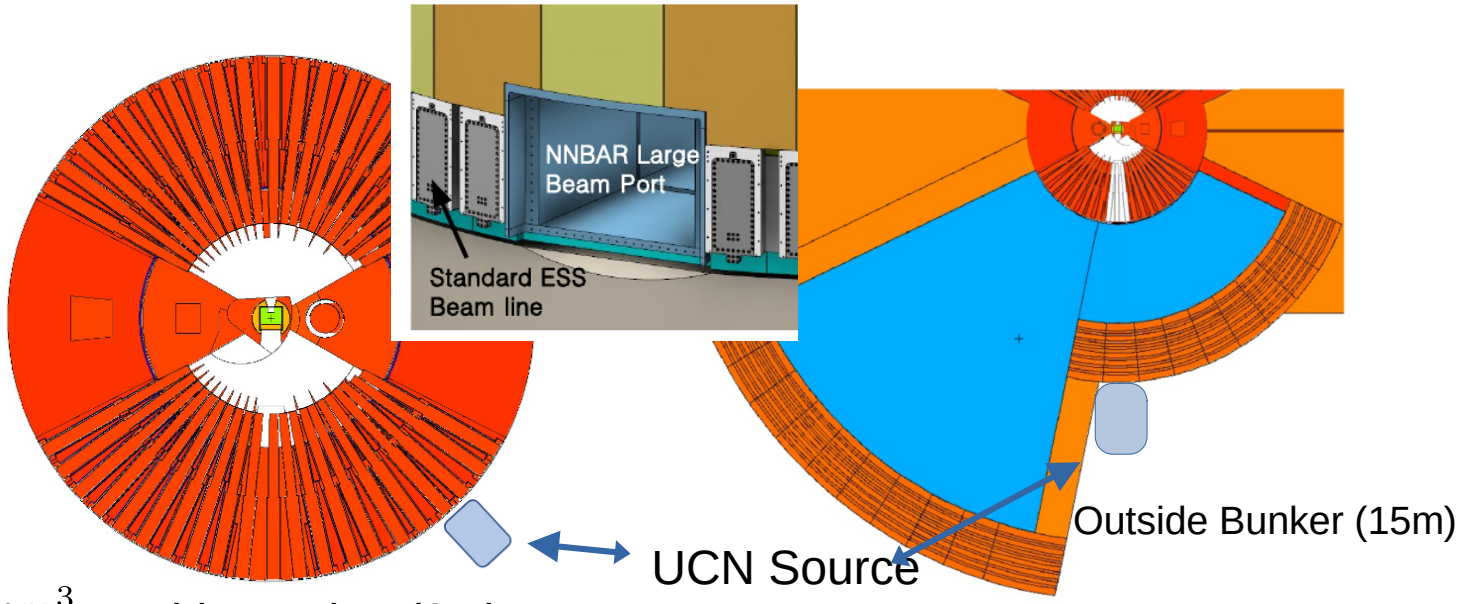


Position of optic has to fulfill trade off between focusing and covering of solid angle

Application Example
In-Beam UCN Source ESS

Ultra - cold neutron UCN production in superfluid Helium





Production Rate:

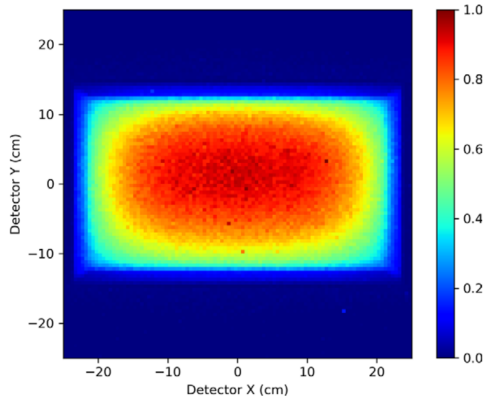
$$P\left(E_{\mathrm{UCN}}\right) = \frac{d\phi(E^*)}{dE} \cdot 1.44 \times 10^{-7} \quad \mathrm{UCN/sec/cm^3}$$

9Å flux at source will convert to UCN flux

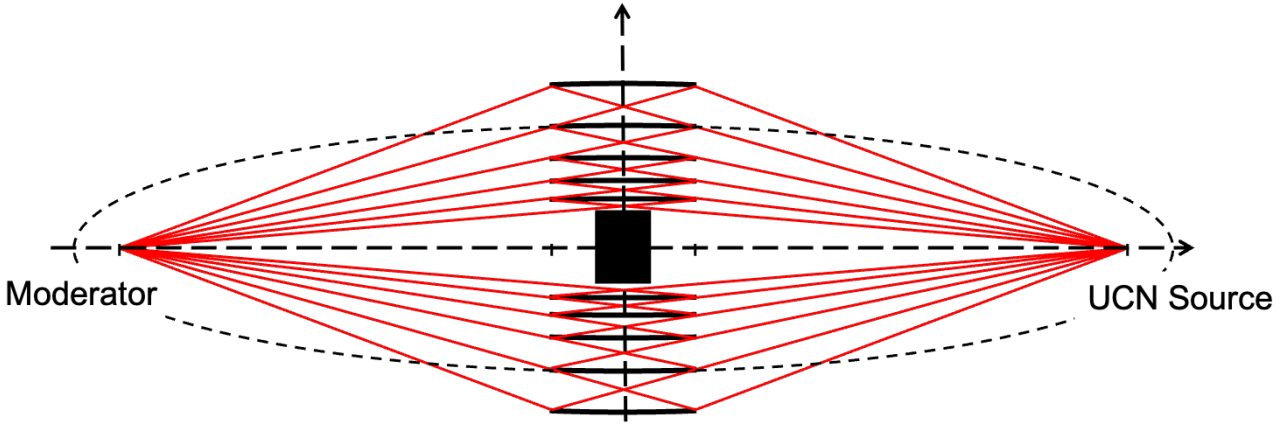
HighNESS is funded by the European Union Framework Programme for Research and Innovation Horizon 2020, under grant agreement 951782

Application Example
In-Beam UCN Source ESS

- Need a neutron delivery system with high brilliance transfer from moderator to UCN source, with largest technically possible solid angle
- Neutron imaging from the moderator to the UCN source via NMOs has been identified as possible solution



Intensity map (simulated) at the ESS LD2 moderator surface of neutrons with WL near 9 Å



In-beam superfluid-helium ultracold neutron source for the ESS

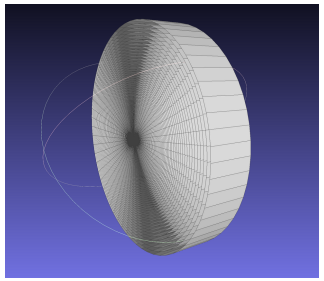
DOI 10.3233/JNR-220045

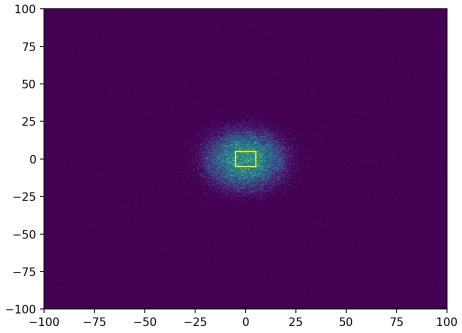
HighNESS is funded by the European Union Framework Programme for Research and Innovation Horizon 2020, under grant agreement 951782

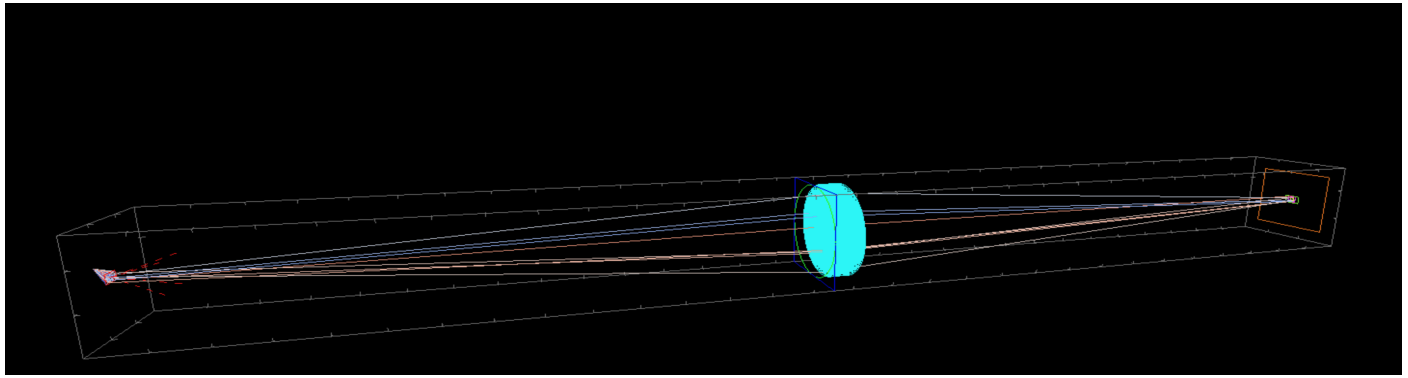
Application Example
In-Beam UCN Source ESS

NMO at 15m:
length 0.5m, 119 levels

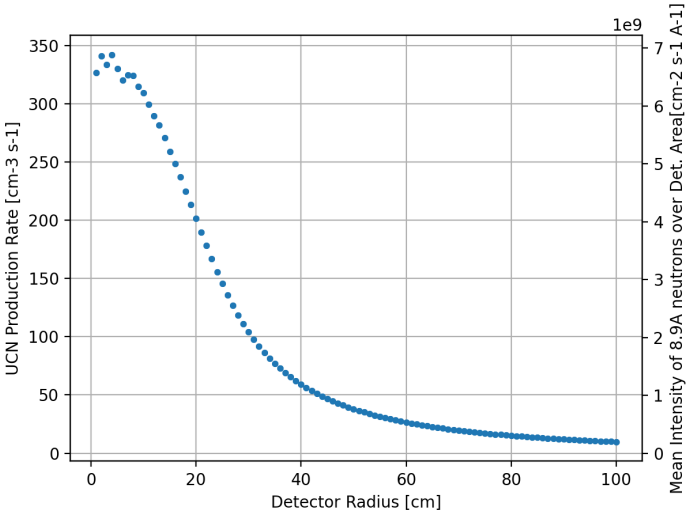
Distance Source-Detector
30m







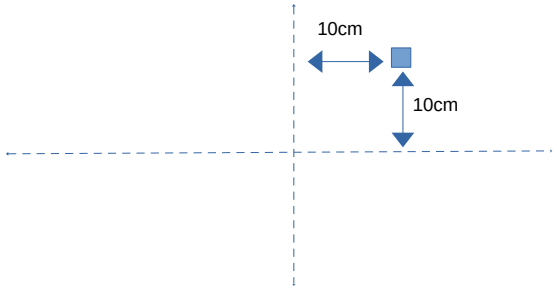
Production Rate



"...at the top of the range of other current projects."
Zimmer et al., JNR 2022

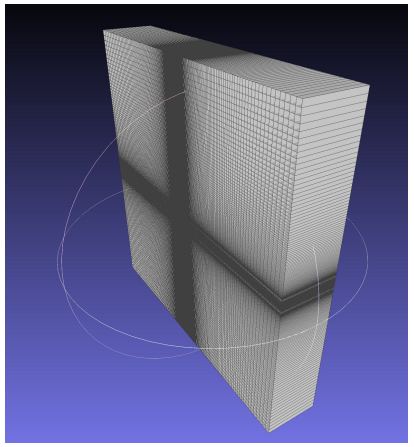
HighNESS is funded by the European Union Framework Programme for Research and Innovation Horizon 2020, under grant agreement 951782

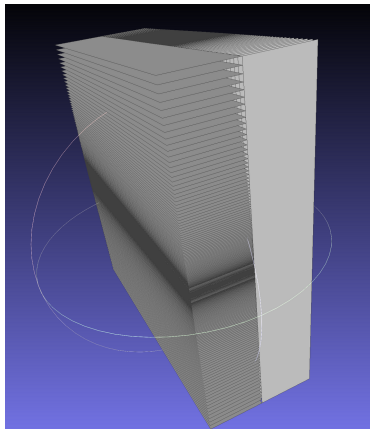
NMOs as (non)-imaging device



off-axis “point” source

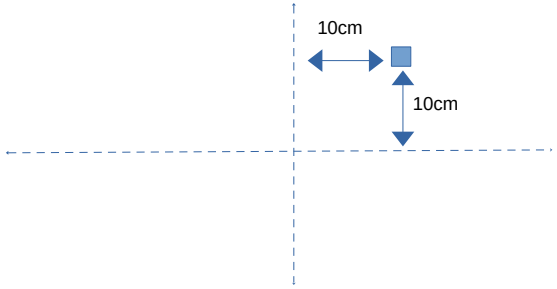
1 Double- or
2 Monoplanar
elliptical NMOs
at 15m
focal length 15m





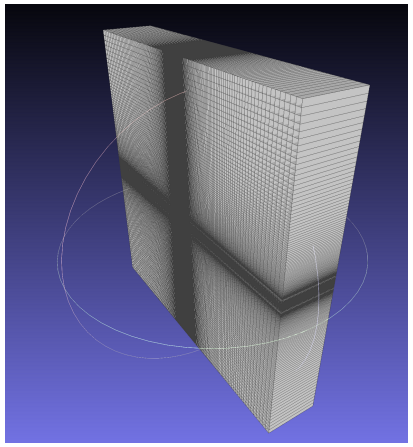
HighNESS is funded by the European Union Framework Programme for Research and Innovation Horizon 2020, under grant agreement 951782

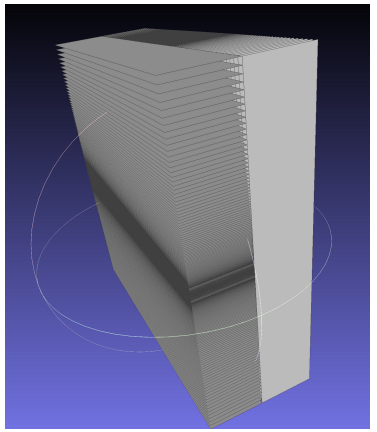
NMOs as (non)-imaging device



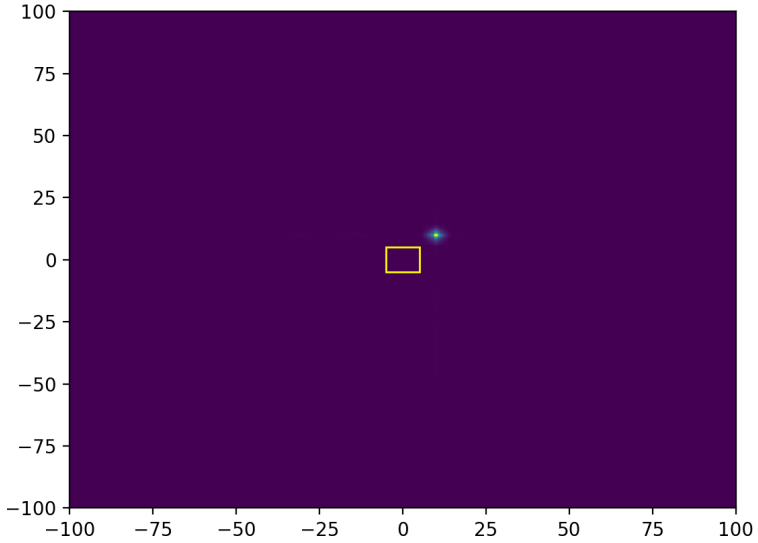
off-axis “point” source

1 Double- or
2 Monoplanar
elliptical NMOs
at 15m
focal length 15m



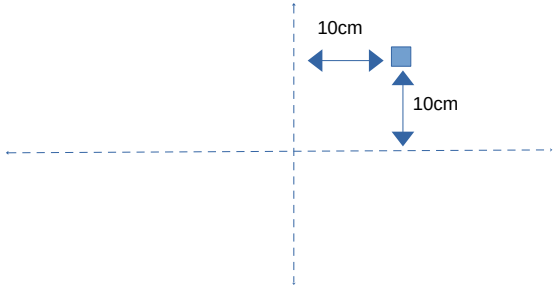


Detector at 30m



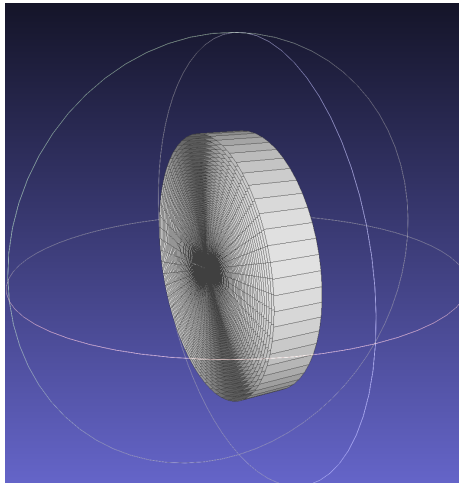
HighNESS is funded by the European Union Framework Programme for Research and Innovation Horizon 2020, under grant agreement 951782

NMOs as (non)-imaging device

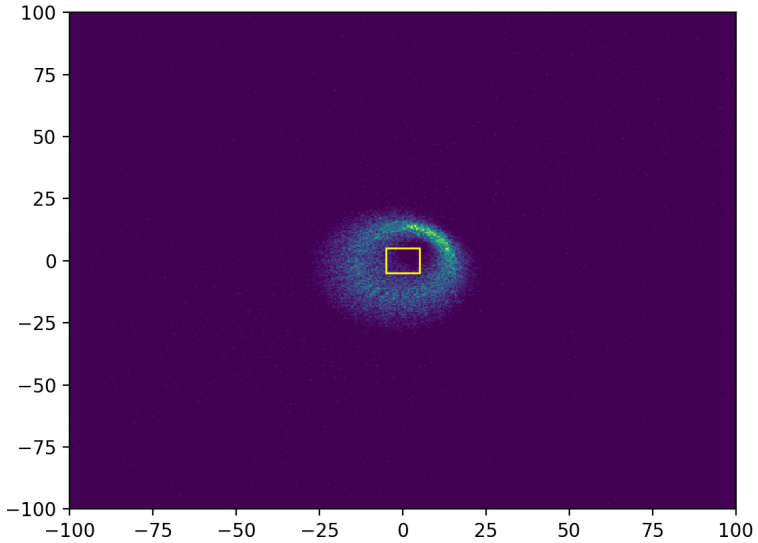


off-axis “point” source

Toroidal (cylindrical)
elliptical NMO
at 15m
focal length 15m



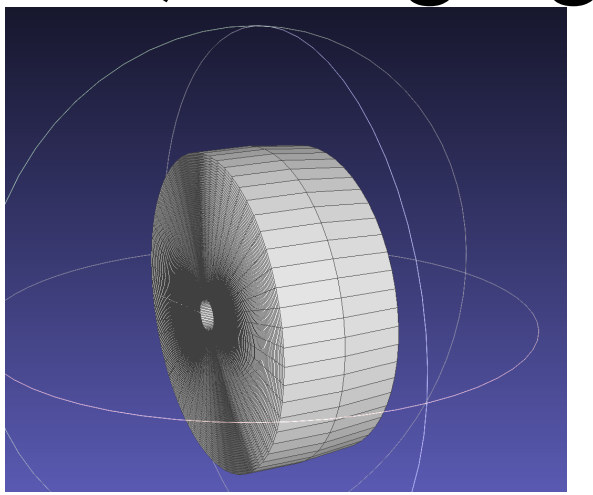
Detector at 30m

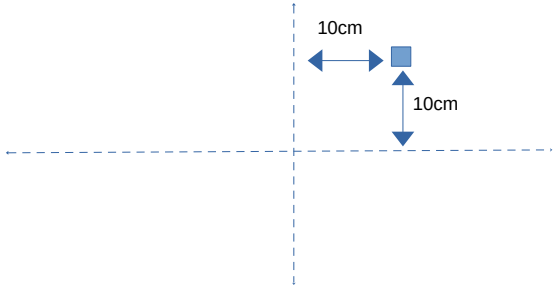


HighNESS is funded by the European Union Framework Programme for Research and Innovation Horizon 2020, under grant agreement 951782

NMOs as (non)-imaging device

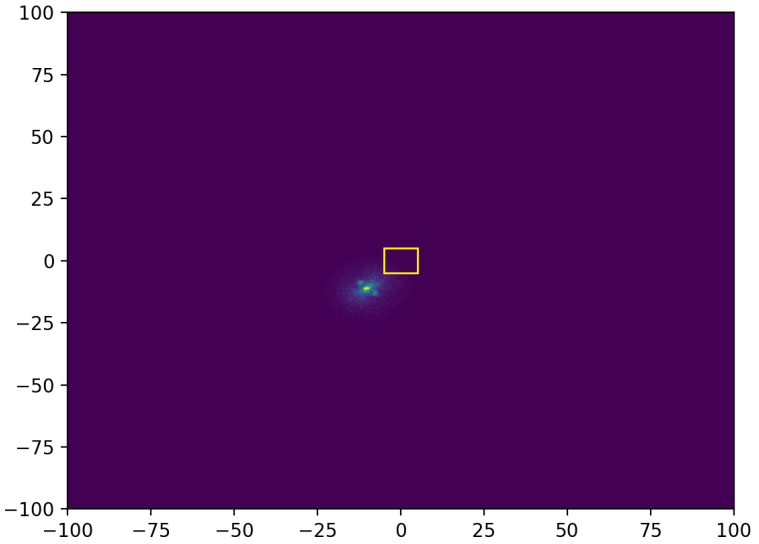
Wolter optic NMO
at ~15m
f_s = 14.9m





off-axis “point” source

Detector at 30m



HighNESS is funded by the European Union Framework Programme for Research and Innovation Horizon 2020, under grant agreement 951782

Room for Improvement

- Support nested layers with different m-values:
  → Guide_anyshape_r.instr
- Asymmetric NMOs: i.e. different half-axis arrays for upper and lower half
- Nested parabolic NMOs (stand-alone or as part of Wolter optic)
- Take into account losses:
  - Thickness of mirrors
  - Waviness, roughness of mirrors
  - Off-specular reflection

HighNESS is funded by the European Union Framework Programme for Research and Innovation Horizon 2020, under grant agreement 951782
