

Security in sciCOREmed

Thursday, 4 May 2023 10:45 (30 minutes)

sciCOREmed is a secure research platform offering a powerful computing environment in which users can transfer, store, manage, and analyze sensitive data. It is also one of the three BioMedIT nodes which form a shared security zone for Swiss researchers to safely access sensitive research data from hospitals and other research organizations. Since security is a core element of the sciCOREmed platform, we take the security-by-design approach.

In this talk, Sudershan will introduce the security architecture of sciCOREmed and present how the critical security controls are implemented to ensure the security of the sensitive data entrusted to sciCOREmed.

Presenter: LAKSHMANAN, Sudershan (University of Basel)
