### **Magnetic Measurement Systems**

### **Merge Measurements and Simulations**

IMMW23

# Magnetic Measurement Roles

- Different roles
  - Development
  - Script development
  - Operation

## MM Software Requirements

- Different measurement benches and types
- Similar, yet different acquisition systems
- Different sensors and actuators
- Different actors of usage
- Measurement data storage and retrieval
- Postprocessing and analysis
- → Need for an efficient software platform as base of operations

### A Flexible Framework for Magnetic Measurements

- Idea for a software framework
   for magnetic measurements
- Reusable
  - Easy to implement small independent blocks
  - Blocks are reusable when needed
- Flexible
  - Easy to write measurement applications
  - Still full control and extendibility

IMMW 15, International Magnetic Measurement Workshop, FERMILAB, Batavia, IL, 21–24 Aug 2007

A software framework, in computer programming, is an abstraction in which common code, providing generic functionality, can be selectively overridden or specialized by user code for providing specific functionalities.

### Postprocessing Rotating Coil Measurements

Postprocessing step to check, clean and Release Rotating Coll Measurements

### Parameters

### Selection of Run

- There are multiple ways of selecting a Measurement
- parentWO: Measurement Request Workorder
- · woNumbers: Run Workorder numbers (Rotating Coll measurement runs) magnetNames: Magnet asset names
- · edmsIdsSel: Directly via a list of Run Analysis edms ids

### In [4]: removeinput #

display(Markdown("""### Version information tm\_analysis\_tools\_package version: (0) \*\*\* format(tm\_analysis\_tools\_\_version\_)})

### Version information

Im analysis tools package version: 2021.8.14 dev19+o6ccdc09

### **FFMM Postprocessing**

- Postprocessing with Python/Jupyter scripts
  - Retrieve data by measurement request
  - Perform data cleanup and checks on . measurements
  - Generate plots, tables, release data into database
- Reusable
  - Generic template with parameters
  - Customized template for specific magnets
  - Common core classes for processing, plotting and
  - database access .
- Traceable .
  - Common code in version control
  - Applied transformations stored in script on EDMS
  - released data linked to EDMS document .

### FFMM Postprocessing Workflow

2024-10-10

# **Further Postprocessing**

- Combine Models and Measurements
  - Avatar: measurement, simulation, inference based on Kirchhoff's theorem
  - Twin: Fusion of measurements, models, empirical rules, machine learning
- Track Avatars, Twins and applied algorithms
- in database
- Improve models with measurement data
- Better understanding of the magnet
- Feedback for new transducers
- or measurements

### 3ML – Magnetic Model Management Layer

- MBSE
  - Measurement models
  - Simulation models
  - Dependencies
  - Automated workflow
  - Result queries

### 3ML – Measurement Based Geometry Update

2024-10-10

## Conclusion

- Framework to build measurement
   applications
  - Built-in traceability and data storage
  - Measurement, postprocessing, analysis
- Integration in CERN IT infrastructure
- Link with simulations and models
