

Felix Armborst on behalf of the Operations Team

Alarm handling for the Accelerators at PSI

European XFEL visit to PSI, November 14th, 2023

I. The alh

- 1. Overview
- 2. Received Questions for this workshop
- 3. Configuration Workflow

II. PSI alh extensions

- 1. Overview
- 2. Alarm Logging Server
- 3. Operation Event Logging System
- 4. Operator Shift Protocol Tool
- 5. ELOG: Tracking Bridged Alarms
- 6. ELOG: Piquet Lists

The all provides

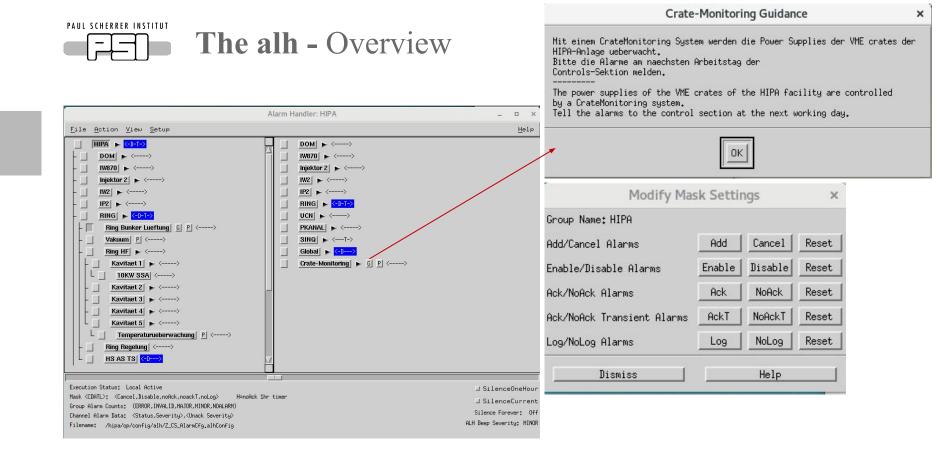

- acoustic and visual indicators
- > guidances
- shortcuts to related panels
- acknowledgment of warnings/alarms by operator
- > possibility to modify mask settings of groups of or individual alarms

Missing / Solved otherwise

- ➢ Persistent and documented Alarm bridging →elog, operator, helpertools (e.g., SchichtProtokollTool)
- ➢ Persistent, failsafe / multi-user / multi-instance Logging →logging server + scraper scripts
- Downtime Logging / Information

Some of the general downsides

- Outdated X-Motif
- > Last update August 2014 \rightarrow No bugfixes, no support, no security (patches)

Page 4

The alh - Received Questions for this workshop

what types of events are supported?

- ➢ EPICS events
 - MAJOR Alarm (i.e., HIHI or LOLO)
 - MINOR Alarm / Warning (i.e., HIGH or LOW)
 - □ Invalid (e.g. defective hardware, out-of-valid-range, ...)
 - Error (PVs disconnected)

how are people notified?

- > Acoustic and visual indications for the operators in the control room
- > Telephone call from the operators to the corresponding expert group / piquet

how are alarms acknowledged?

- > With a click from the operator
- how is the alarm handler configured
 - ➤ See slide 7

The alh - Configuration Workflow

- Chain of Command
 - ➢ Alarm Definitions (Expert Groups and Operations) → Merge Requests
 - \succ Config File on Git (Machine Responsible from Controls) \rightarrow Quality Control
 - ➢ Git Auto-Deployment (Simon Rees, Rene Kappeller)
 - > User (Operations)
- SLS
 - Andreas Luedeke, Felix Armborst
 - ≻ Renata
- PROSCAN
 - Stephan Maeder
 - ≻ Hubert
- SwissFEL
 - > Christoph Kittel, Didier Voulot
 - ≻ N/A
- ✤ HIPA
 - Thomas Marder
 - ≻ Hubert

See also the "SwissFEL alarm handler policy" on indico for further information

PSI alh extensions - Overview

- Logging (mostly part of the extension package)
- Only one all instance per machine is allowed to write to oracle, others write to file
- Individual sound for each machine (4 facilities handled by one group of operators!)
- Various wrappers
- Operator tools for
 - > Piquet lists
 - Persistent and tracked bridging of alarms
- * ...

PSI alh extensions - Alarm Logging Server

Server receives alarms of each machine (local msgqueue + tcp2oracle)

PAUL SCHERRER INSTITUT

- All alarms stored in relational database
- Web service (intranet) to browse and filter alarm logs:
 - <u>https://gfa-operation.intranet.psi.ch/alh/?fac=SLS</u>
 - <u>https://gfa-operation.intranet.psi.ch/alh/?fac=HIPA</u>
 - <u>https://gfa-operation.intranet.psi.ch/alh/?fac=Proscan</u>
 - <u>https://gfa-operation.intranet.psi.ch/alh/?fac=SF</u>

- Used for SLS, HIPA und SwissFEL
- Rules defining "Events" are easily configurable and arbitrary amount of events can be defined
- Easily adjustable for different control systems
- A. Lüdeke, "Operation event logging system of the Swiss Light Source", <u>https://link.aps.org/doi/10.1103/PhysRevSTAB.12.024701</u>
