

Toward a Lol for a future $\mu \rightarrow e\gamma$ search

Francesco Renga
INFN Roma

Inputs for discussion

- It was proposed to produce a **Letter of Intent** for a future $\mu \rightarrow e\gamma$ experiment, to be submitted to PSI at one of the next BVR meetings
- Some discussions by mail indicate that BVR 2025 is too early
 - not enough time, given the commitments of people in the ongoing experiments
- BVR 2026 could be fine
- What about an intermediate document to be produced by the beginning of 2025?
 - I have to produce something like this, in any case, for a European project on muon physics (aMUSE)
 - It would motivate us not to postpone these activities excessively
 - Document on arXiv? Conference contribution? Regular paper?
- Please subscribe to our mailing list
