## Search for a neutron EDM at SNS

Thursday 14 October 2010 15:40 (20 minutes)

The nEDM Collaboration is developing an experiment to run at the Spallation Neutron Source (SNS) at Oak Ridge National Laboratory to search for the neutron electric dipole moment (EDM) with a sensitivity of <10^{-27} e cm based on the scheme proposed by Golub and Lamoreaux. The collaboration has been working on various R&D experiments to establish the technical feasibility of the experiment and to guide the design of the apparatus. The collaboration has also been working towards finalizing the engineering of the experimental apparatus. In this talk, the principle of the experiment and the status of the project will be presented.

Primary author: Dr ITO, Takeyasu (Los Alamos National Laboratory)
Presenter: Dr ITO, Takeyasu (Los Alamos National Laboratory)
Session Classification: Session Th - 3

Track Classification: Searches for permanent electric dipole moments
