GÉANT3plus and FIM4R
- We're here to help

Ann Harding, SWITCH

FIM4R Workshop, Vilingen, March 2013
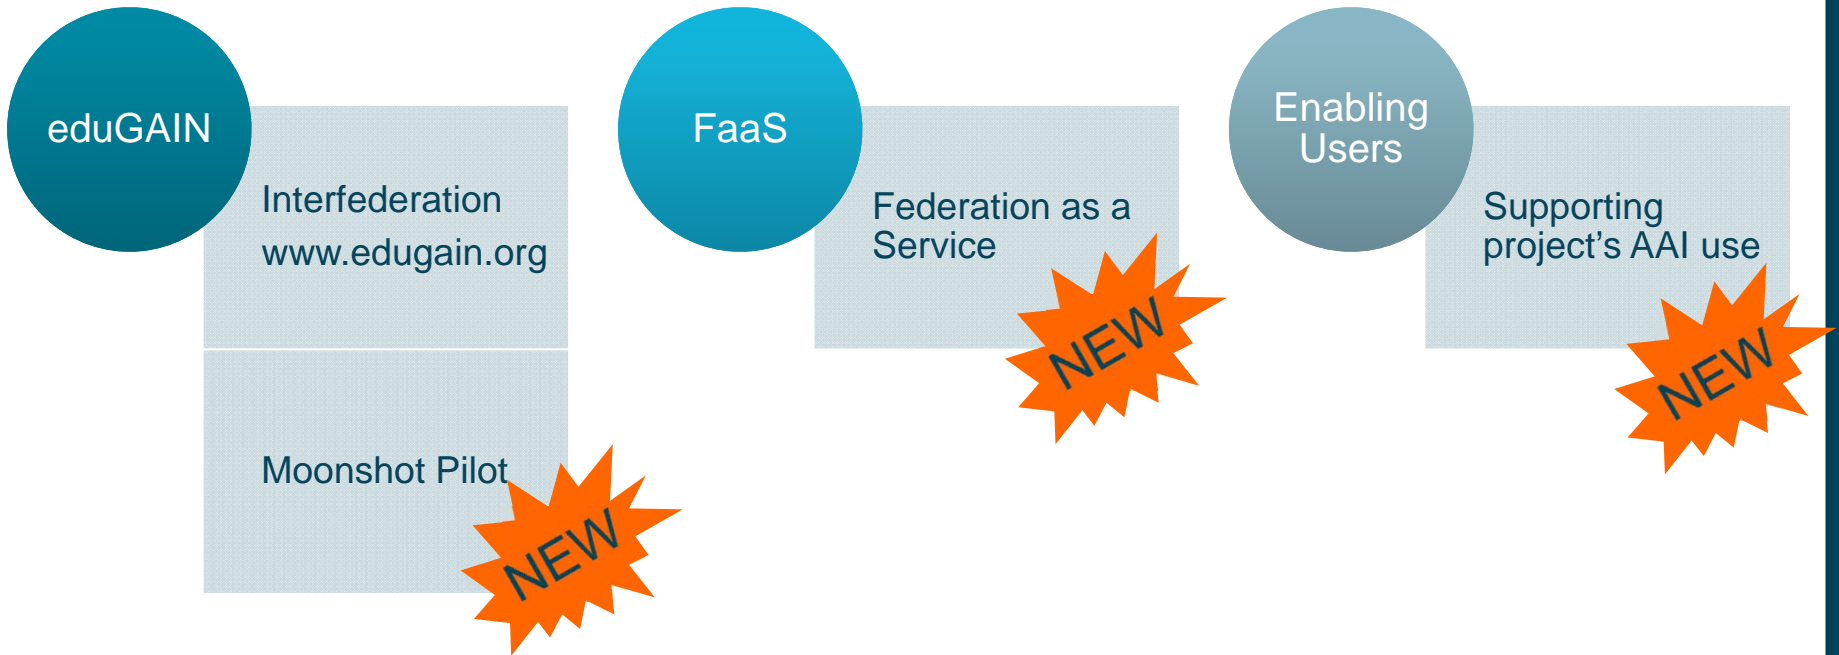

AAI a Key Part of GN3plus Strategy

Delivering end-user application services offering federated identity services with global management, video and access to resources as services from the computing and data domain independently of the geographic point from which access is made.

…creating a step change in an Innovative Hybrid network infrastructure that is accessible from everywhere due to a general and federated AAI system

Remove geographic barriers and digital divide limitations through a federated AAI service across the network for the European knowledge community order to ensure mobility using to the maximum possible extent existing AAI efforts such as EDUgain, STORK, etc.

Support for LoA in current authentication infrastructures

Focus on Users

- Enable key user groups to deploy and use AAI end to end
- Work in partnership with user communities
- Focus on 2-3 real world use-cases
  - *Which extend current capabilities*
  - *Which are reusable/re-adaptable more widely*
  - *Which are achievable within 2 years*
  - *Which we have the key skills and influence to help you deliver*
  - *Anchored in the FIM4R priorities*

- Project runs from April 1
- Looking for use cases NOW!
- Already confirming interest for non-web SSO (Moonshot) for GRID/HPC communities with some NRENs
- Paper response gives likely areas

- We can
  - *Supply our AAI experts to your existing pilots using our budget*
  - *Influence and support national identity federations to meet your needs*
- Some direct co-funding possibilities
  - *Open calls (JRA)*
  - *Enabling Users project support*
- Contribute to Federation-as-a-Service market analysis
