

Umbrella Bridging

Almudena Montiel / Björn Abt

Contents „Umbrella Bridging“ presentation

Part 1: Umbrella Introduction

Part 2: Why to bridge?

Part 3: What to bridge?

Part 4: How to bridge?

Part 5: Use Cases at GSI-FAIR

Umbrella is the Pan-European Federated Identity System for Users of the Photon / Neutron Facilities

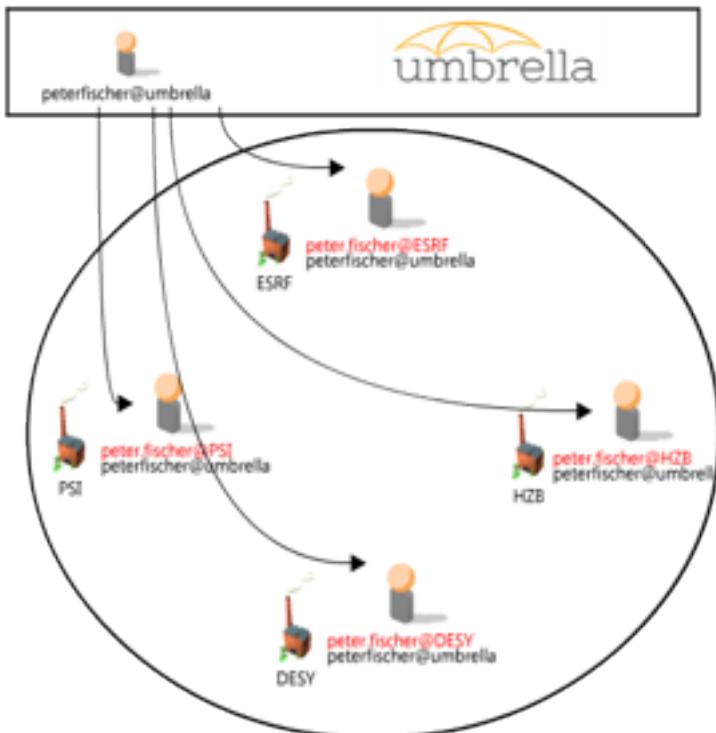

Goal:

–Optimization of experimental data handling from data acquisition to publication:

- data acquisition
- data analysis
- data transfer
- trans-facility experiments
- remote data access
- remote experiment access

Umbrella:

- Provides an EU-wide, unique, persistent user identification
- Respects fully confidentiality
- Is dedicated to the photon / neutron user community
- Is a slim solution on top of the local user office systems
- Users manage own entries, supervised by local user offices
- Bridging to similar identification systems (EduGain, Grid) under development
- Common development of the major European facilities through several EU projects (EuroFEL ESFRI, PaNDa ODI, PaNDa Europe, CRISP), lead by PSI.
- Start of implementation spring 2013

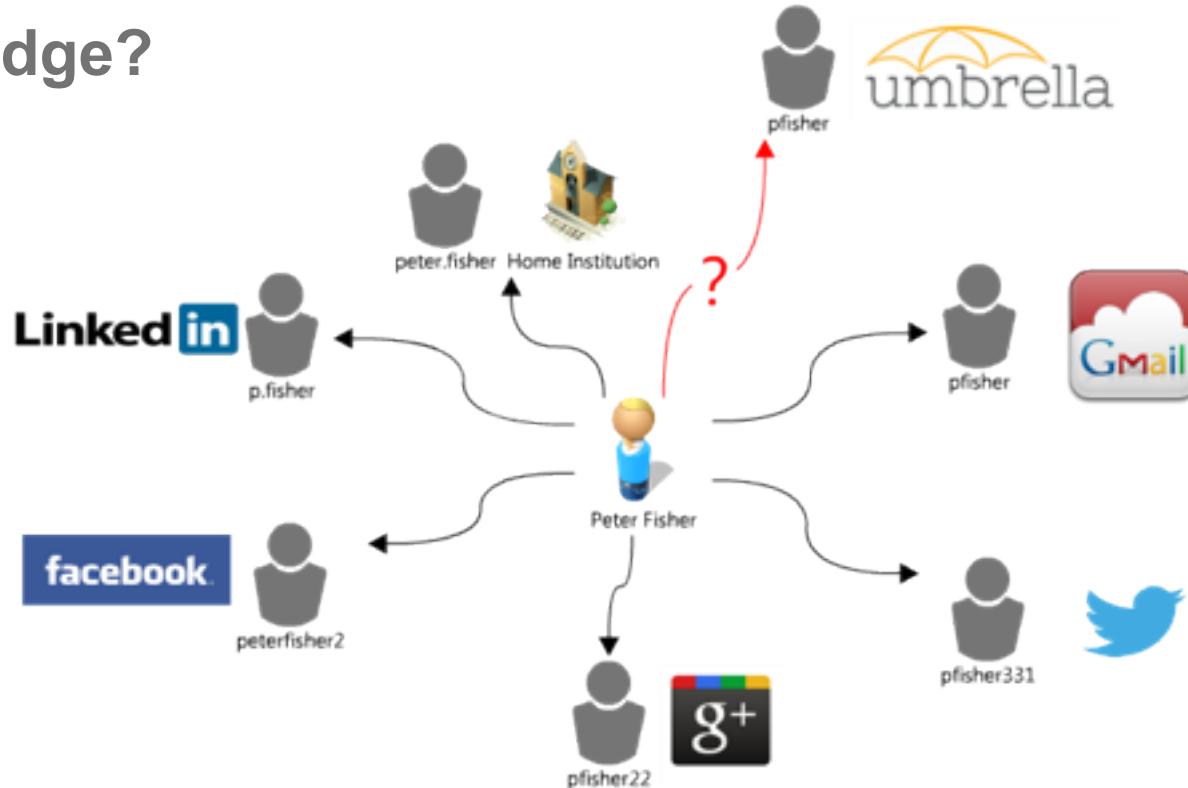

Umbrella is the basis for various user services under development

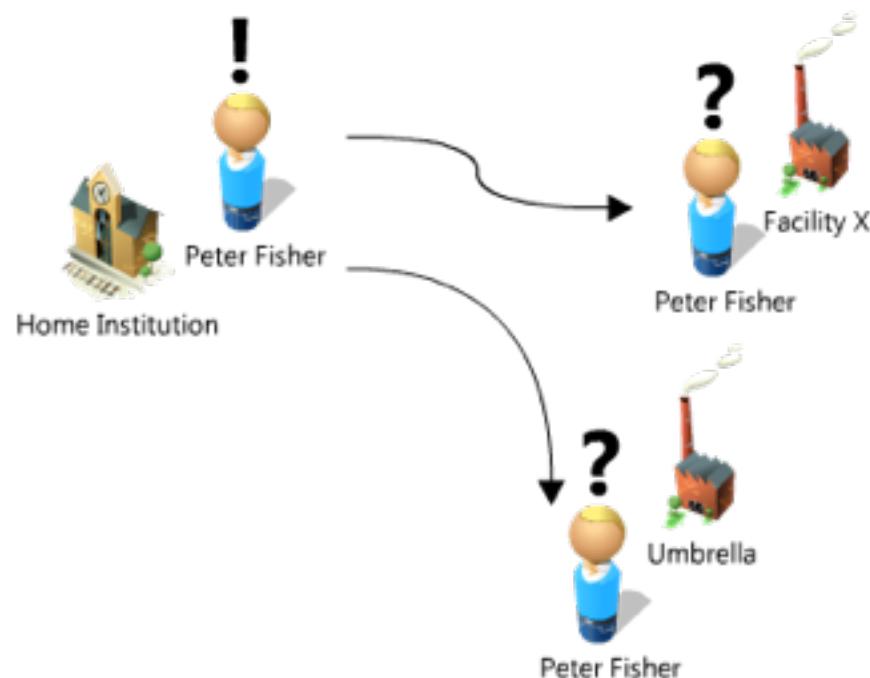

- a. Info & service portal
- b. European proposal support (NMI3 & CALIPSO)
- c. Remote experiment access
- d. Remote file access (ICAT)

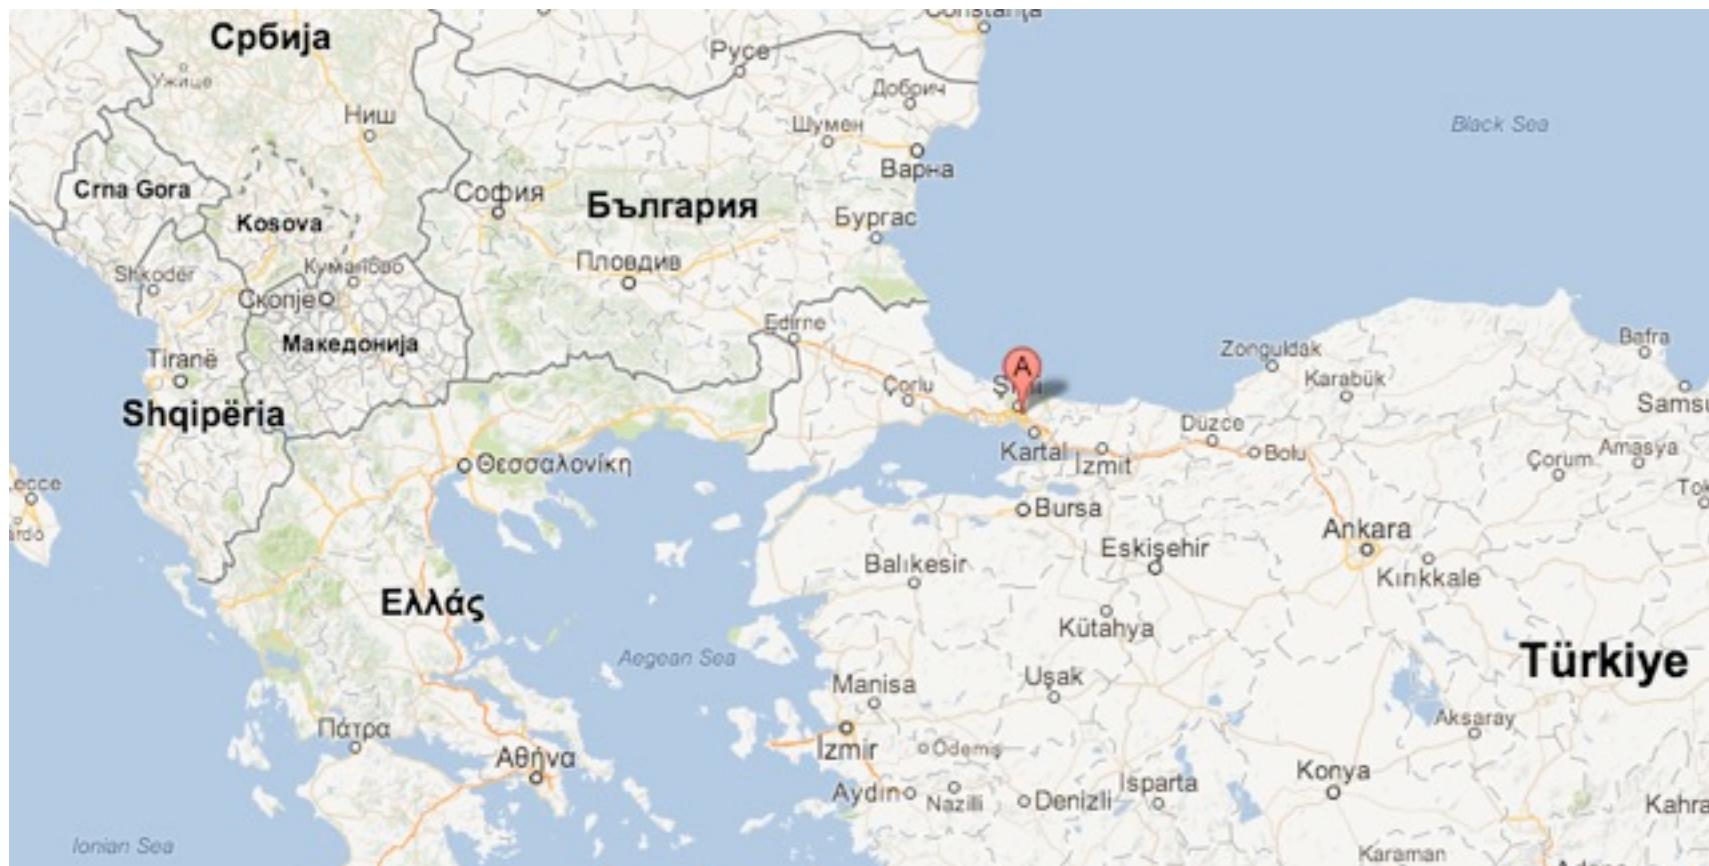

Why to bridge?

Why to bridge?

User already know their home institution credentials

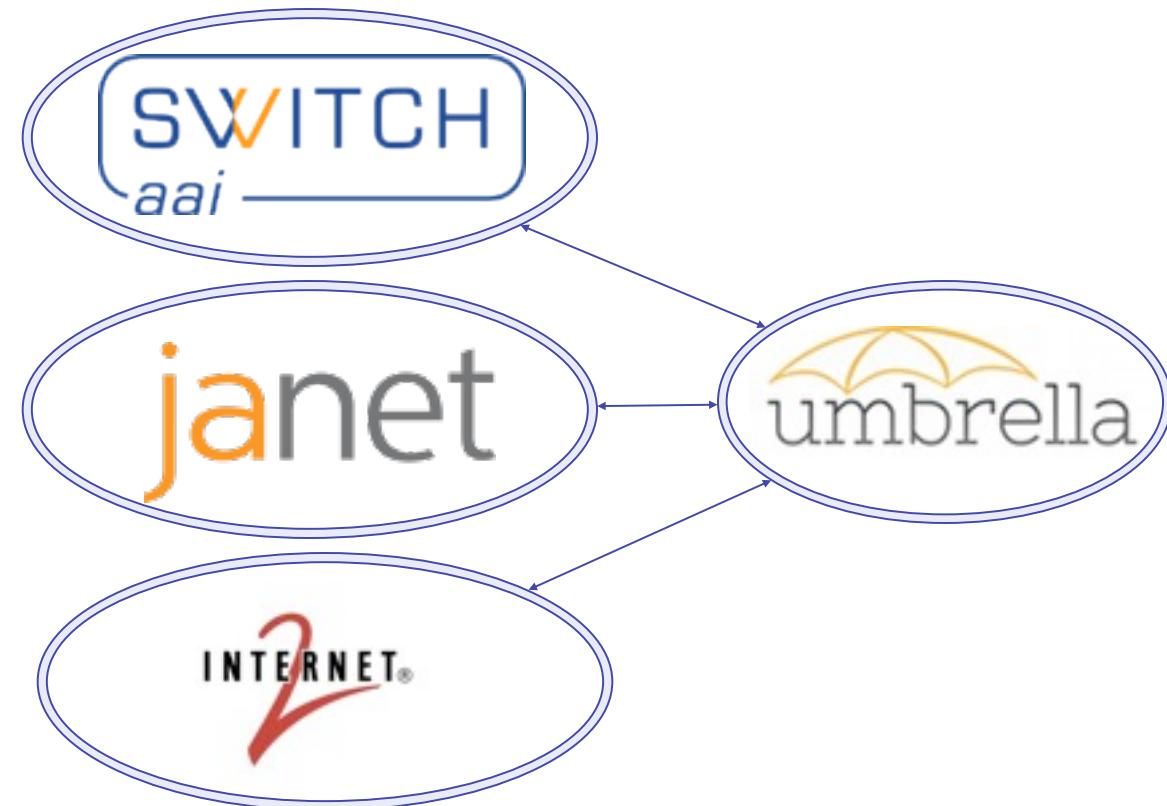

Why to bridge?

- Bring people together from different federations (cultures)
- Not yet another account
- People already know their home institution account

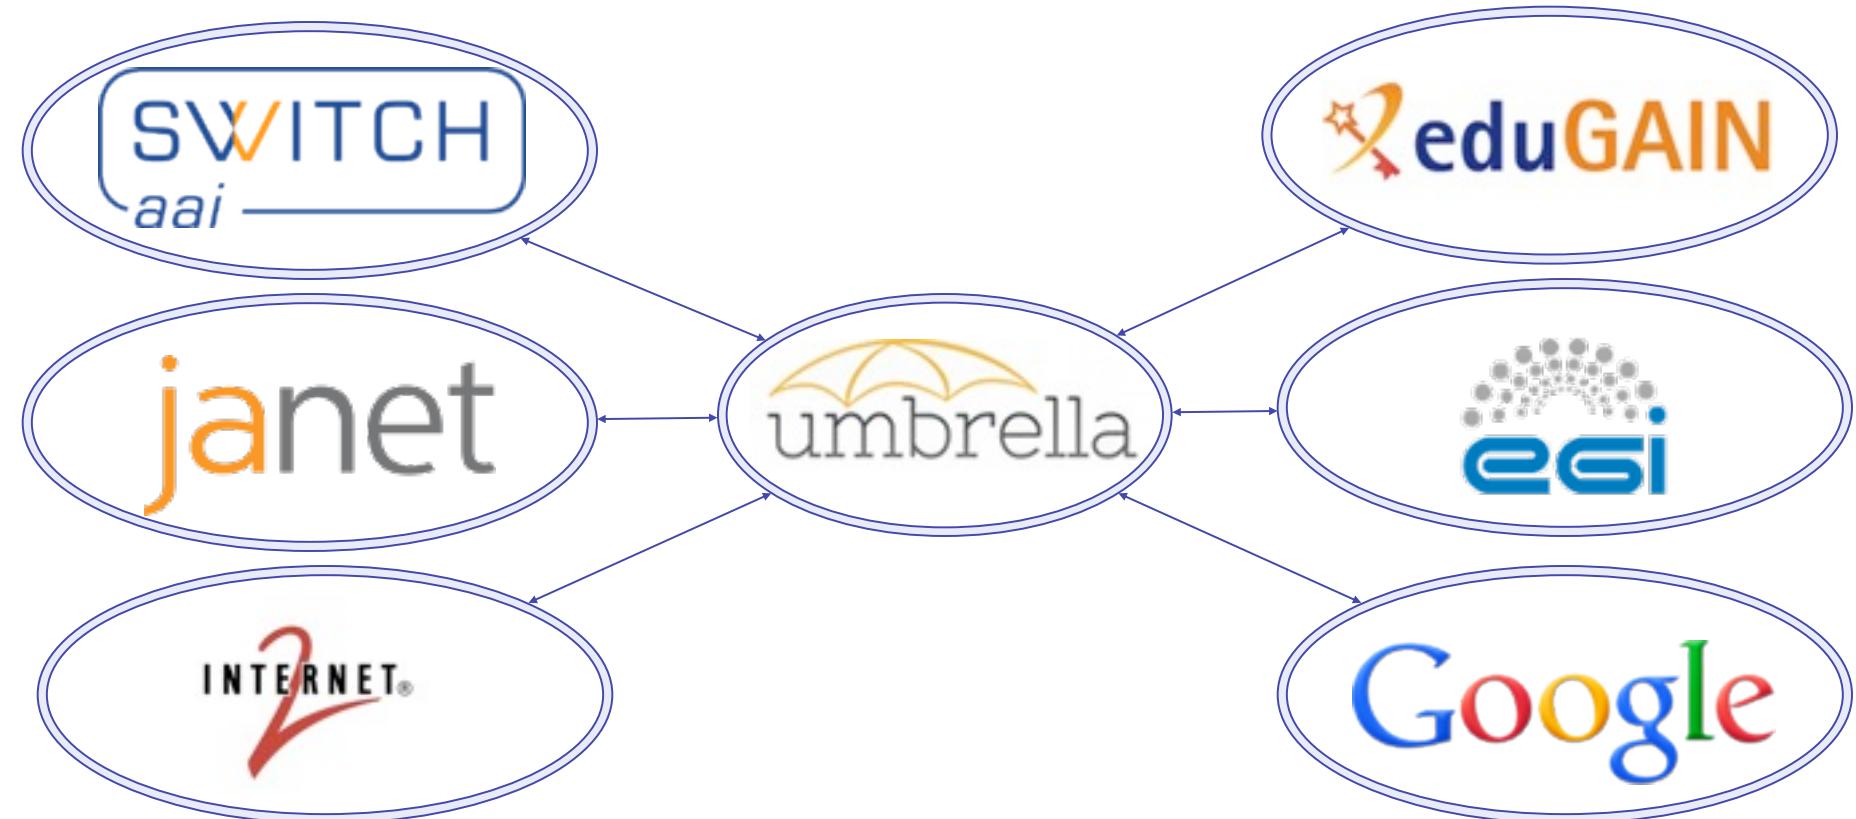

What to bridge?

What to bridge?

What to bridge?

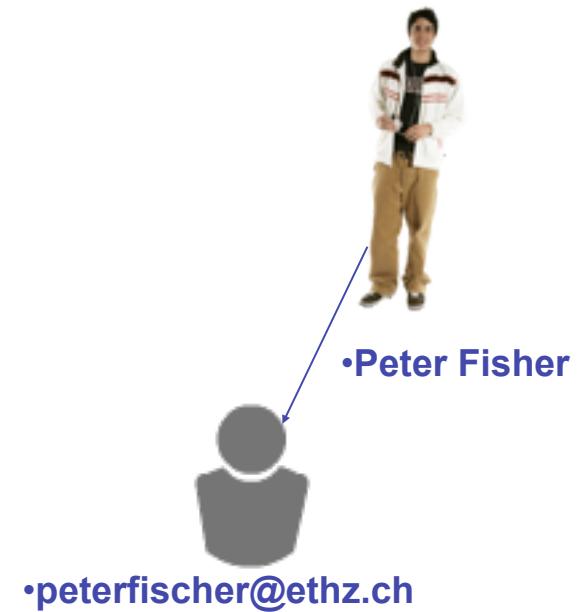

What to bridge?

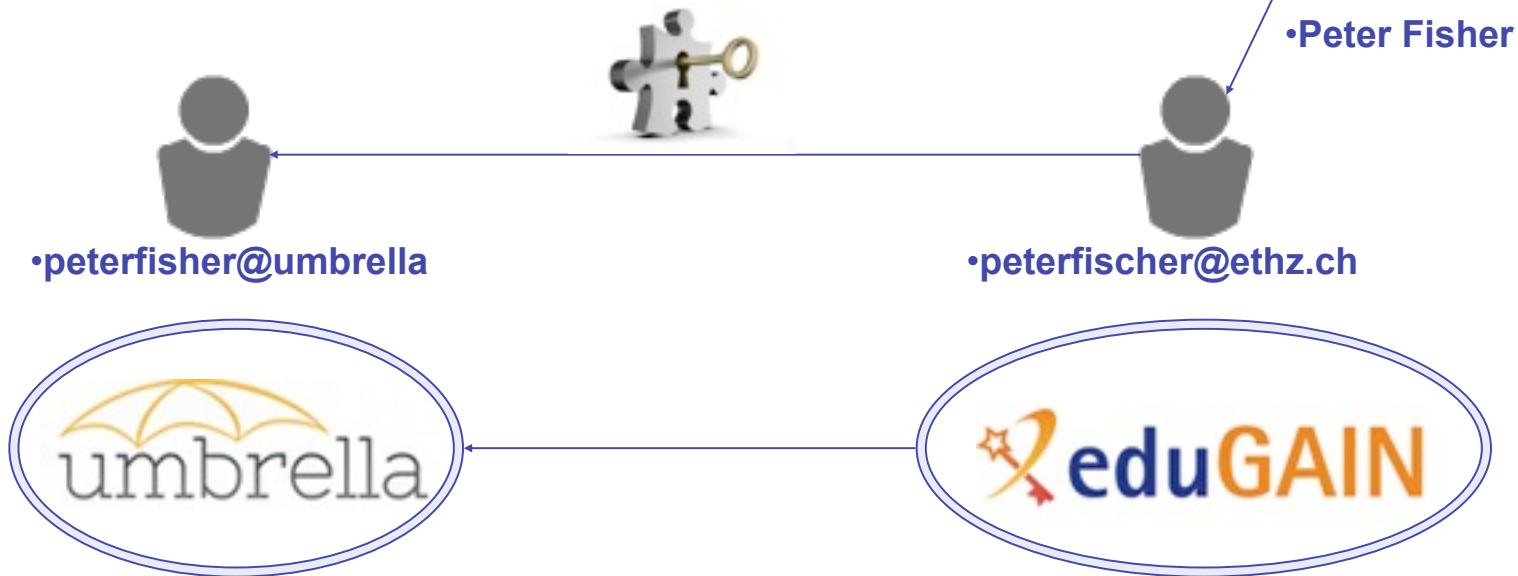

Keep the Umbrella philosophy:

- User initiated inter-federation mapping of accounts
- No automatic cross exchange of information

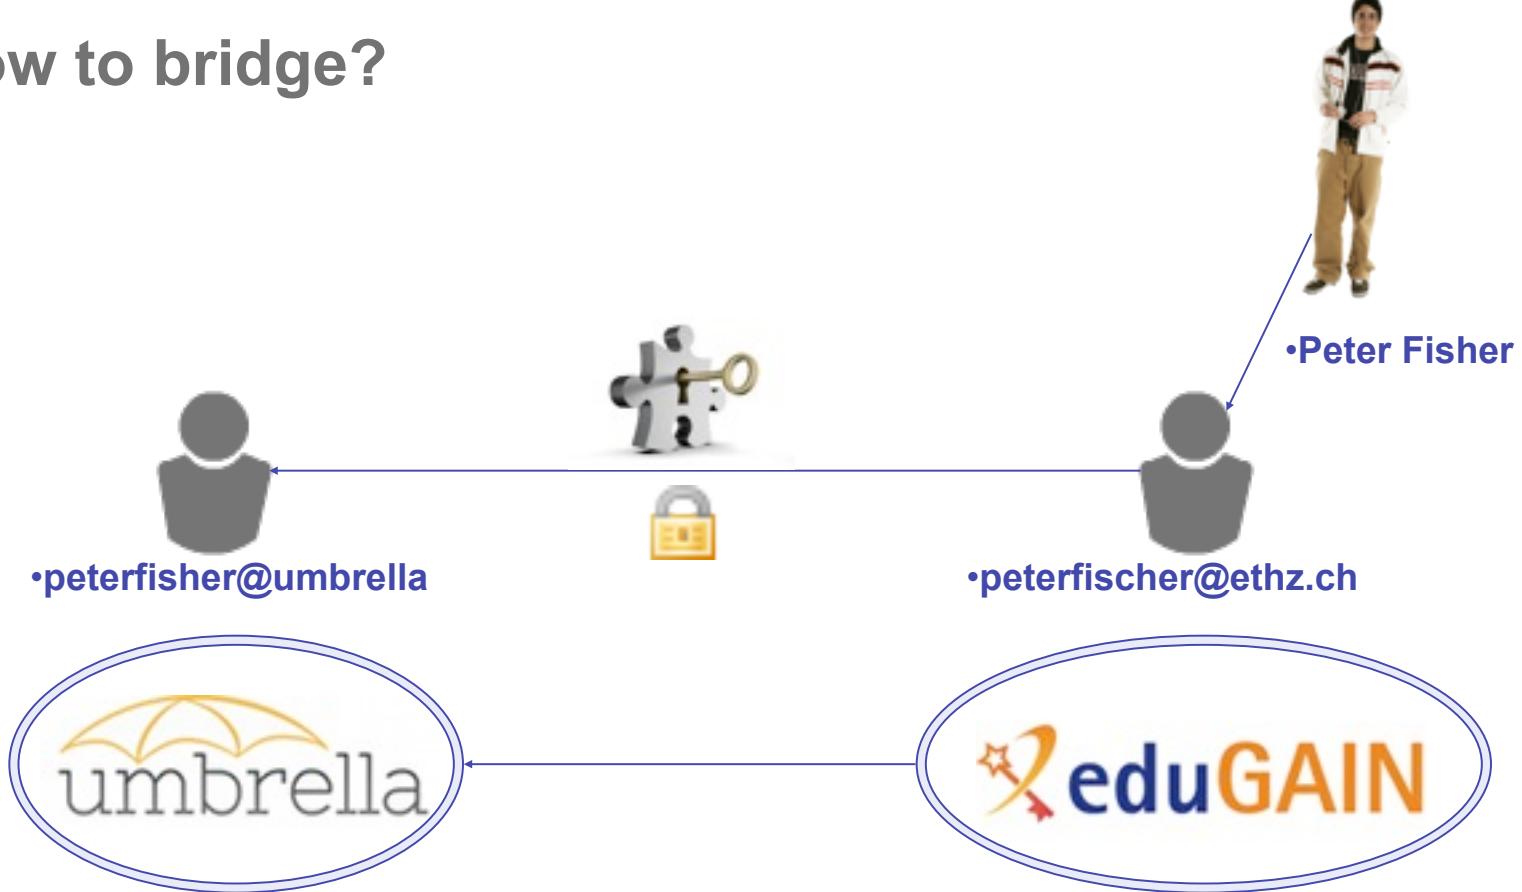

How to bridge?

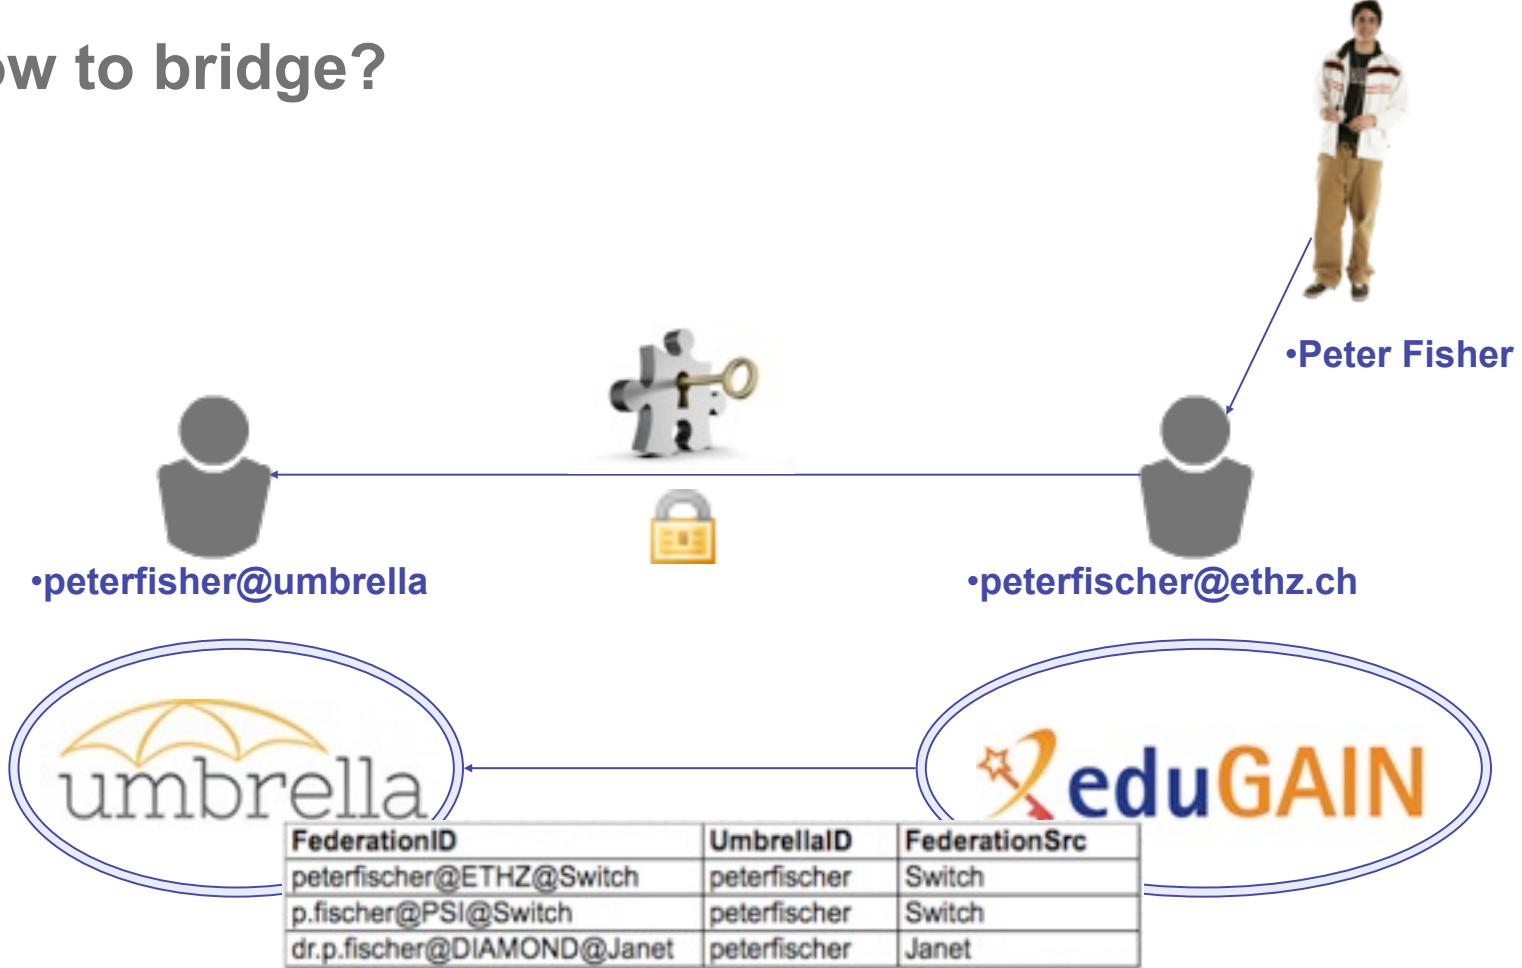

How to bridge?

How to bridge?

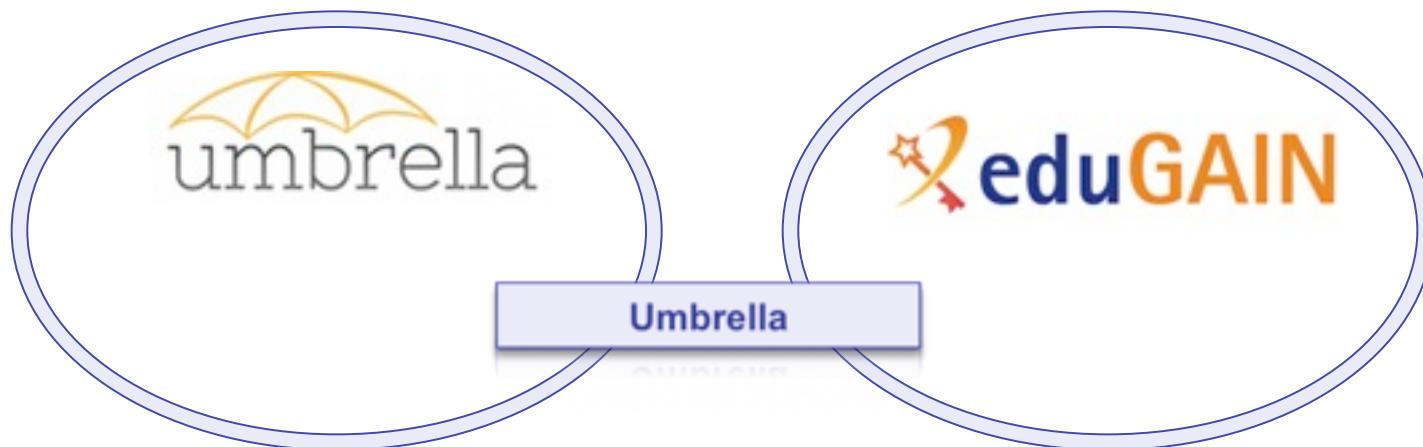

How to bridge?

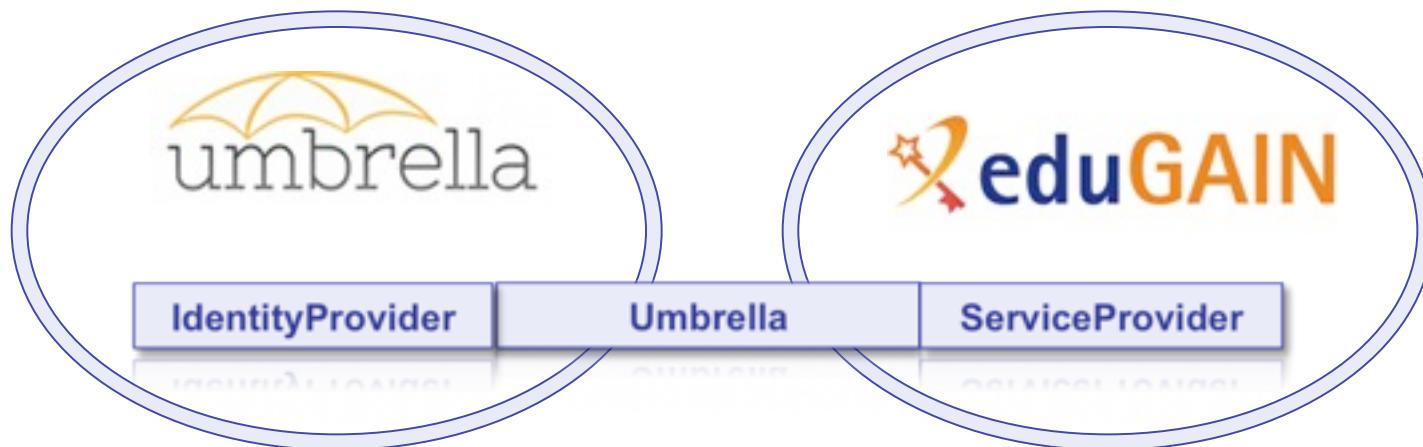

How to bridge?

To get user information from a federation one has to be a service provider in it.

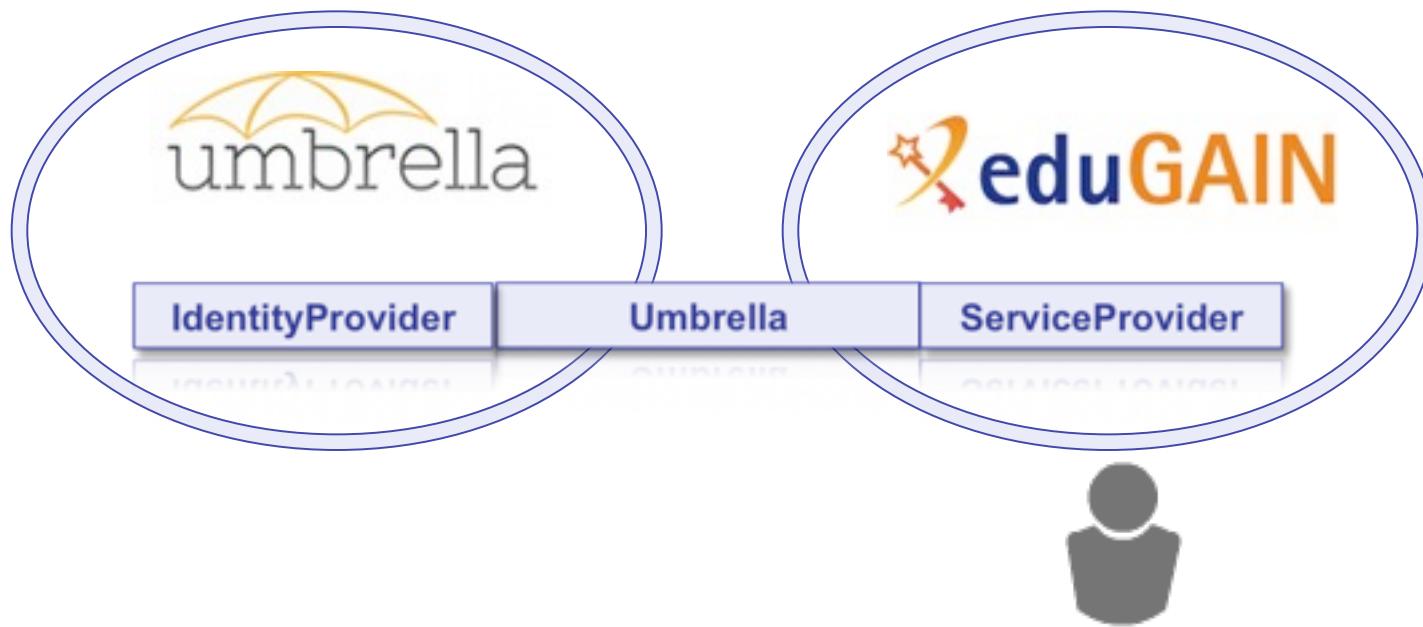

How to bridge?

To get user information from a federation one has to be a service provider in it.

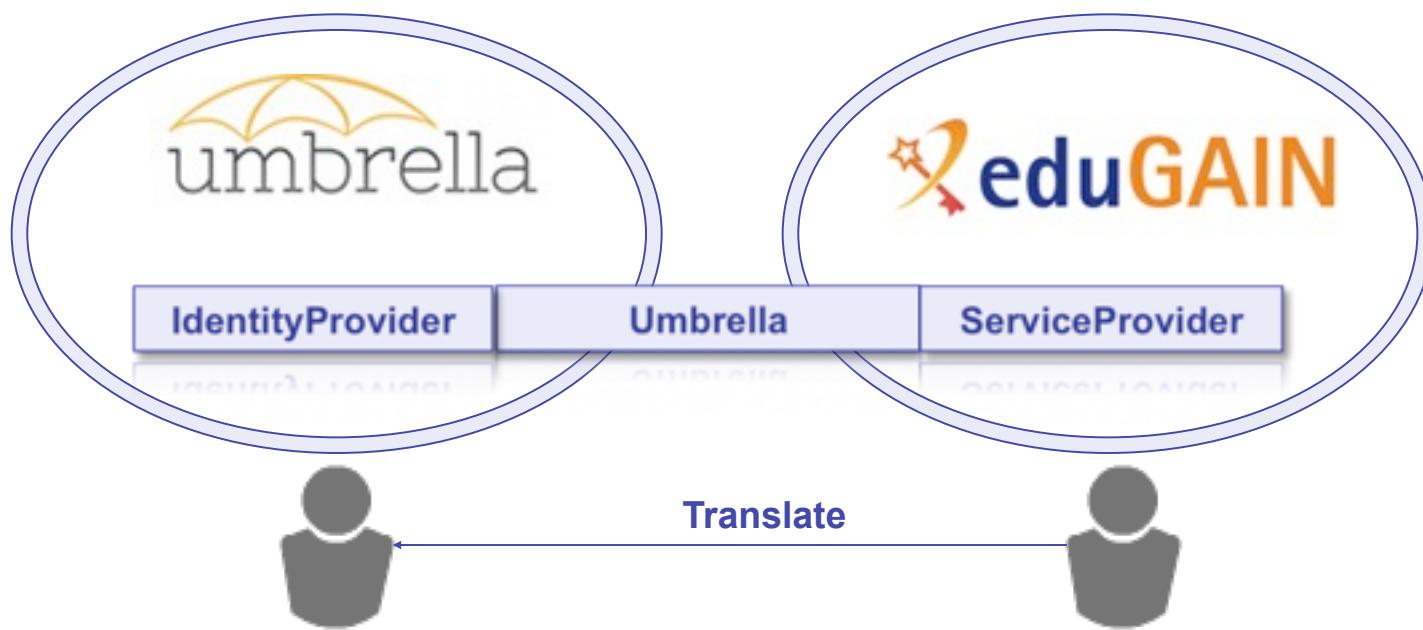

How to bridge?

To get user information from a federation one has to be a service provider in it.

How to bridge?

To get user information from a federation one has to be a service provider in it.

How to bridge?

An AccountLinking Table on the Umbrella keeps track of linked accounts:

FederationID

- A cross federation unique identifier of an account
- E.g. peter.fisher@ethz.ch@eduGain

UmbrellaID

- A unique Umbrella identifier
- E.g. peterfisher

FederationSrc

- The name of the federation of the source account
- E.g. eduGain

How to bridge?

An AttributeMapping table translates attributes from one federation to another federation.

sourceAttribute

- An exact attribute name from an incoming federation
- E.g. mail

destinationAttribute

- The attribute name for an outgoing attribute name
- E.g. email

How to bridge?

Attributes released to Service Providers

sourceFederation

- The name of the federation where the Authentication happened

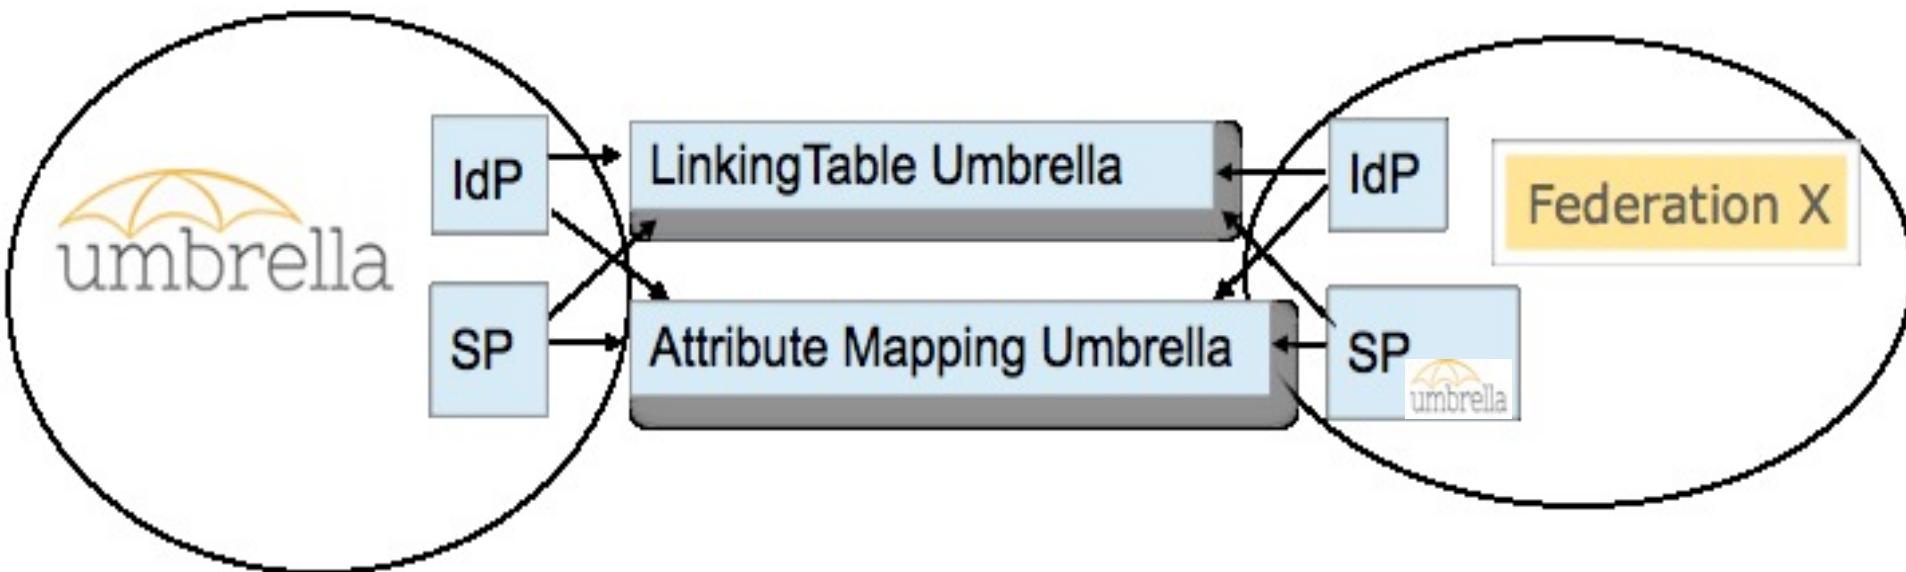

- E.g. eduGain

authenticationMethod

- The type of method of authentication

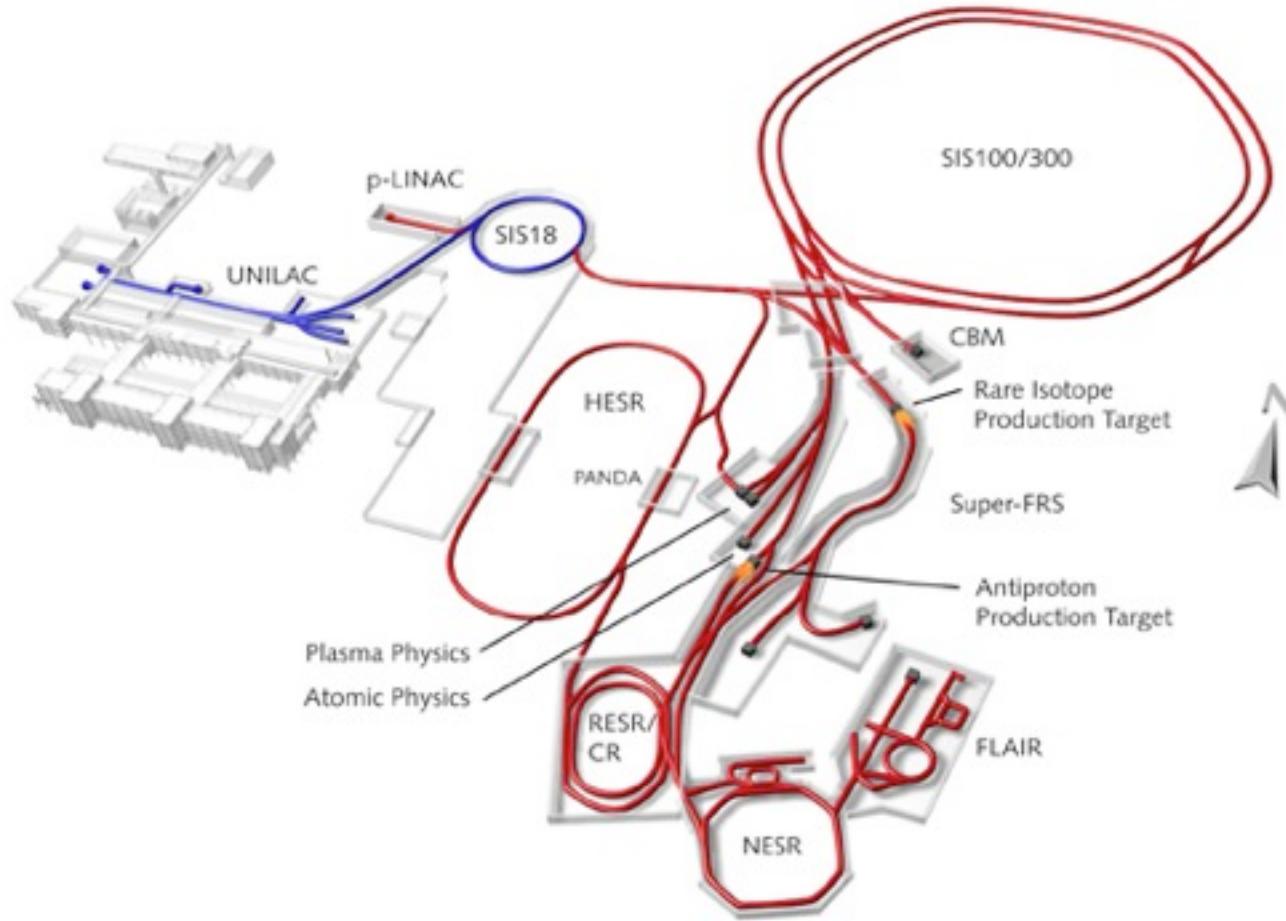

- E.g. Two-Phase Kerberos / OATH

How to bridge?

Use Cases at GSI-FAIR

(Almudena Montiel)

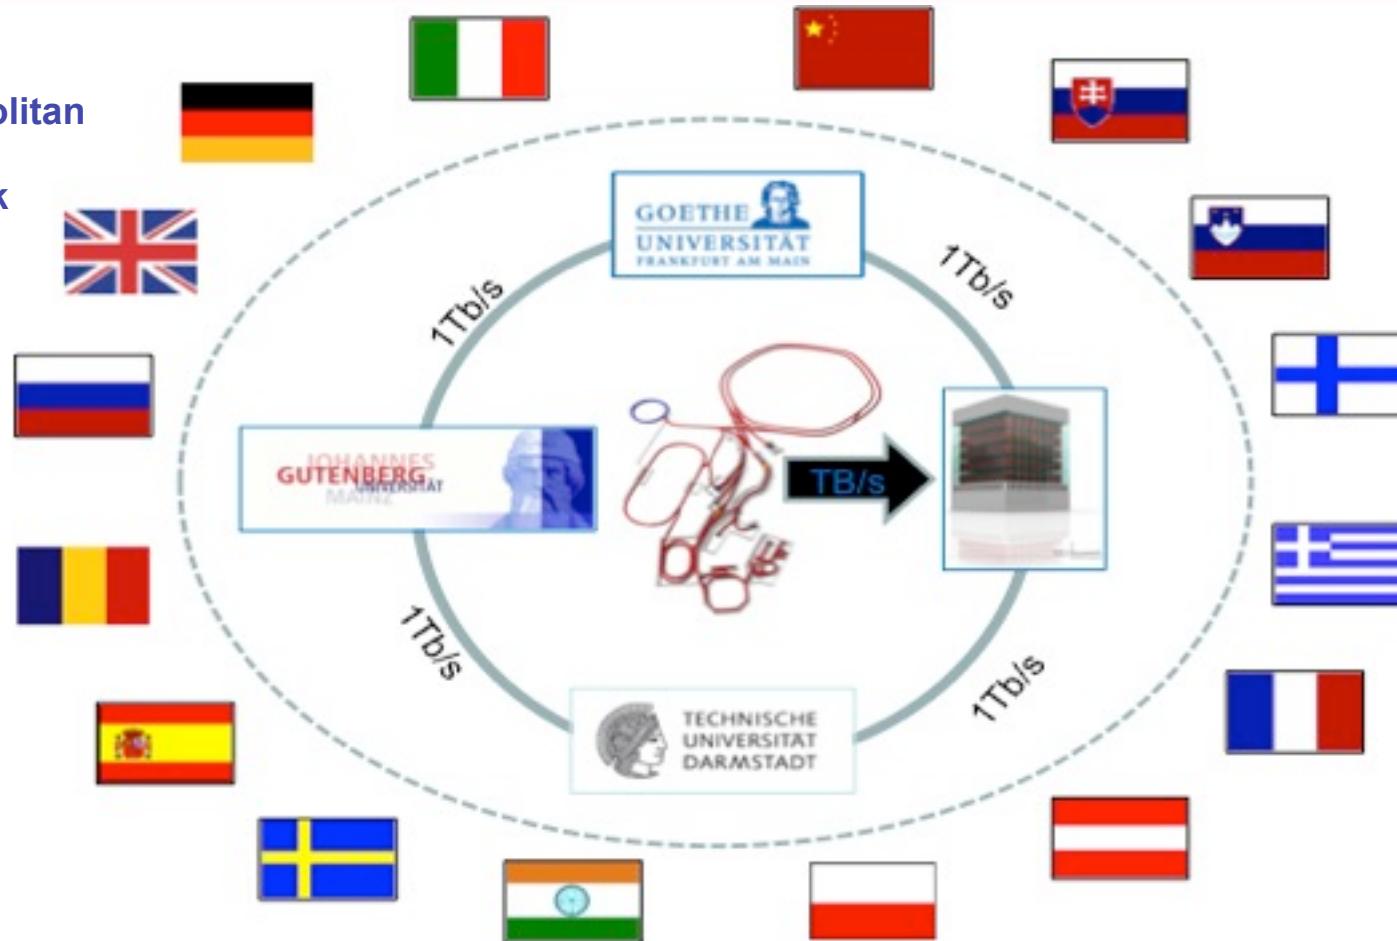

User community at GSI/FAIR

- GSI Computing **today**:
 - ALICE T2/T3
 - HADES
 - 14000 cores, 5.5 PB Lustre, 9 PB archive
- FAIR Computing in **2018**:
 - CBM, PANDA, NuSTAR, APPA, LQCD
 - 300000 cores, 40 PB Lustre, 40 PB archive

FAIR community

- APPA - Atomic, Plasma Physics and Applications
 - BIOMAT – BIOlogy and MATerial science
 - FLAIR – Facility for Low-energy Antiproton and Heavy Ion Research
 - HEDgeHOB/WDM – Plasma physics experimental stations
 - SPARC – Stored Particle Atomic Research Collaboration
- CBM/HADES – Compressed Baryonic Matter
- NuSTAR – Nuclear Structure Astrophysics and Reactions
 - R3B – Reactions with Relativistic Radioactive Beams
 - DESPEC – Decay SPECtroscopy
 - HISPEC – High resolution SPECtroscopy
 - MATS – Precision Measurements of very short-lived nuclei with Advanced Trapping System
 - LASPEC – LAser SPECtroscopy of short-lived nuclei
 - ILIMA – Isomeric beams Lifetimes and Masses
- PANDA – AntiProton Annihilation in Darmstadt

Metropolitan
Area
Network

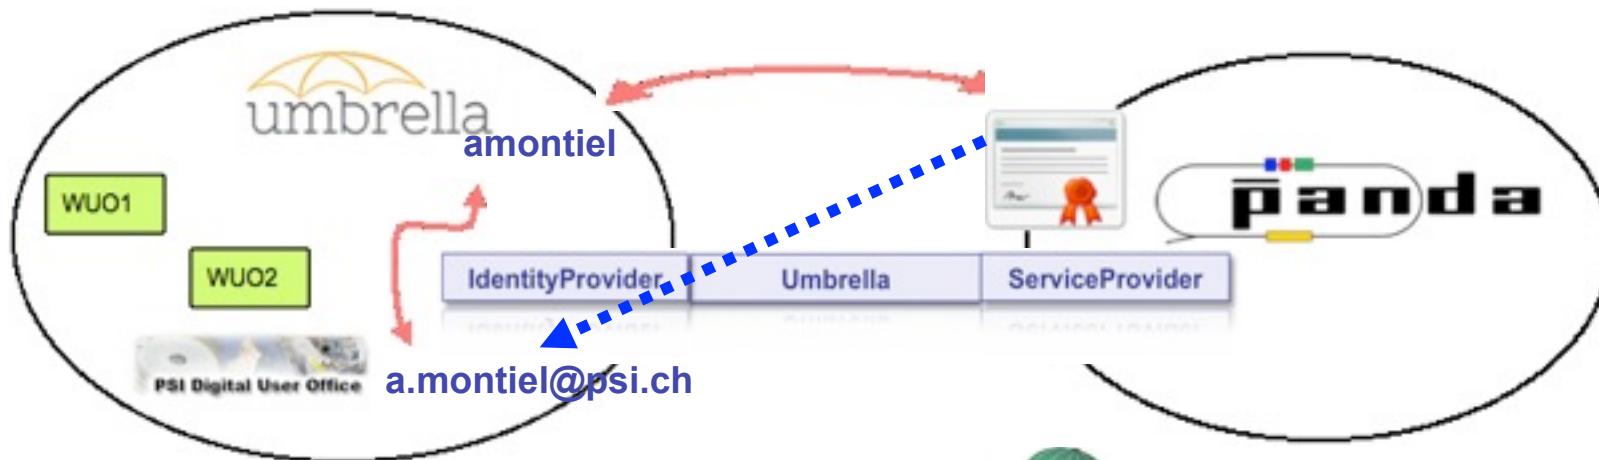

Use Case: GRID

- Middleware used: AliEn.
- Lightweight Open Source Grid framework initially developed by the ALICE Collaboration.
- Heavily exploited for simulation, reconstruction and distributed analysis of physics data.
- Authentication: PKI.
- Authorization: Central LDAP managed by AliEn.

Proof of concept of Bridging

- GSI-FAIR has presumably is a big HEP like community.
- Most of the users hold a personal x.509 certificate.
- Demonstration:
 - The user holds a x.509 installed in the browser.
 - The user has got a DUO account.
 - The user has got an Umbrella ID.
 - Link existing between Umbrella and DUO.
 - Bridge created behind the scenes, between Umbrella and x509 certificate.

Almudena Montiel

Thank you for your attention!
