

# Umbrella

*Thursday, 21 March 2013 09:50 (25 minutes)*

Umbrella has been developed as the federated-identity tool as basis for the IT user services at the European photon and neutron large facilities. After a successful test with 'friendly users' the system is now ready for deployment. As this will directly affect user operation with 30'000+ visiting scientists, the transition will be performed gradually in 4 phases. The presentation will give a short description of the system and explain the implementation phases.

**Presenter:** VAN DAALEN, Mirjam

**Session Classification:** Pilots & Projects III
