JUM@P '11: Joint Users' Meeting at PSI 2011

Contribution ID: 42

Type: Poster

Sample Environment News

Thursday, 15 September 2011 12:15 (2 minutes)

The sample environment team at PSI provides expertise and support for systems to manipulate the sample or its environment during experiments at large scale facilities. A variety of cryostats, furnaces and cryo-magnets enable experiments under extreme conditions. Over the past years we have extended the experimental possibilities substantially. We will present a selection of new setups which have been successfully used for neutron scattering experiments. This includes examples such as a new horizontal magnet of 6.8 T, electric fields at low and ultra low temperatures using voltages up to 6 kV and high currents at the mK temperature range.

Postersession 1 and 2 (Thu and Fri)

Primary author: Dr BARTKOWIAK, Marek (Paul Scherrer Institut)
Co-author: Dr ZOLLIKER, Markus (Paul Scherrer Institut)
Presenter: Dr BARTKOWIAK, Marek (Paul Scherrer Institut)
Session Classification: Poster session I and lunch

Track Classification: Poster Session I (Thursday)
