Status of LCLS and Future Developments

Monday, 26 October 2020 15:50 (20 minutes)

The Linac Coherent Light Source (LCLS) began user operations in 2009 and has performed over 500 full-scale user experiments with ever-expanded operating modes/capabilities. The facility recently emerged from a long down period where new electron transport, undulators, x-ray transport systems and x-ray instruments were installed. First commissioning results of these new systems will be presented as well the status of three ongoing upgrade projects: LCLS-II, LCLS-II-HE and MEC-U.
