# Proton accelerator facilities at PSI

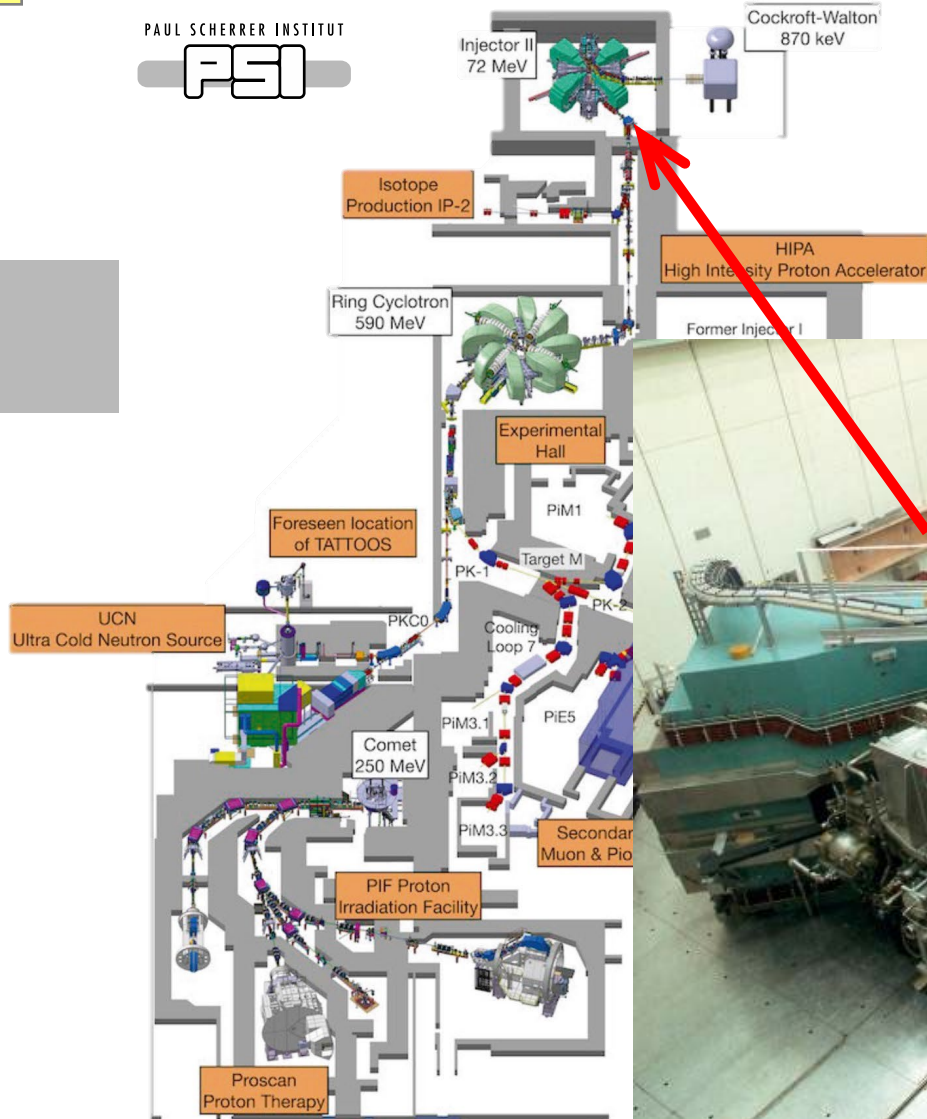

# Proton accelerator facilities at PSI

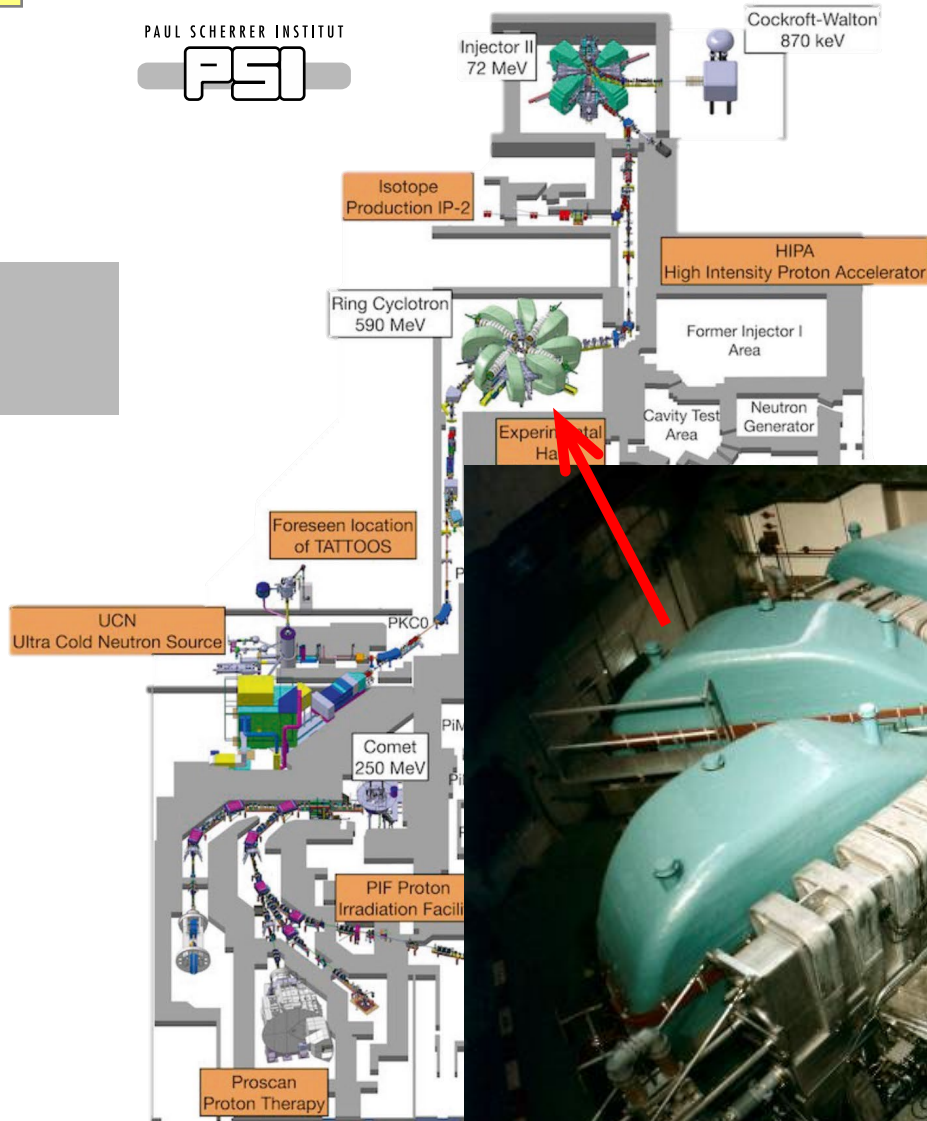

# Proton accelerator facilities at PSI

# How its began

1981 - 1992

pion tumor-therapy at SIN/PSI

1994 SINQ was operational

and serves as a total beam-dump

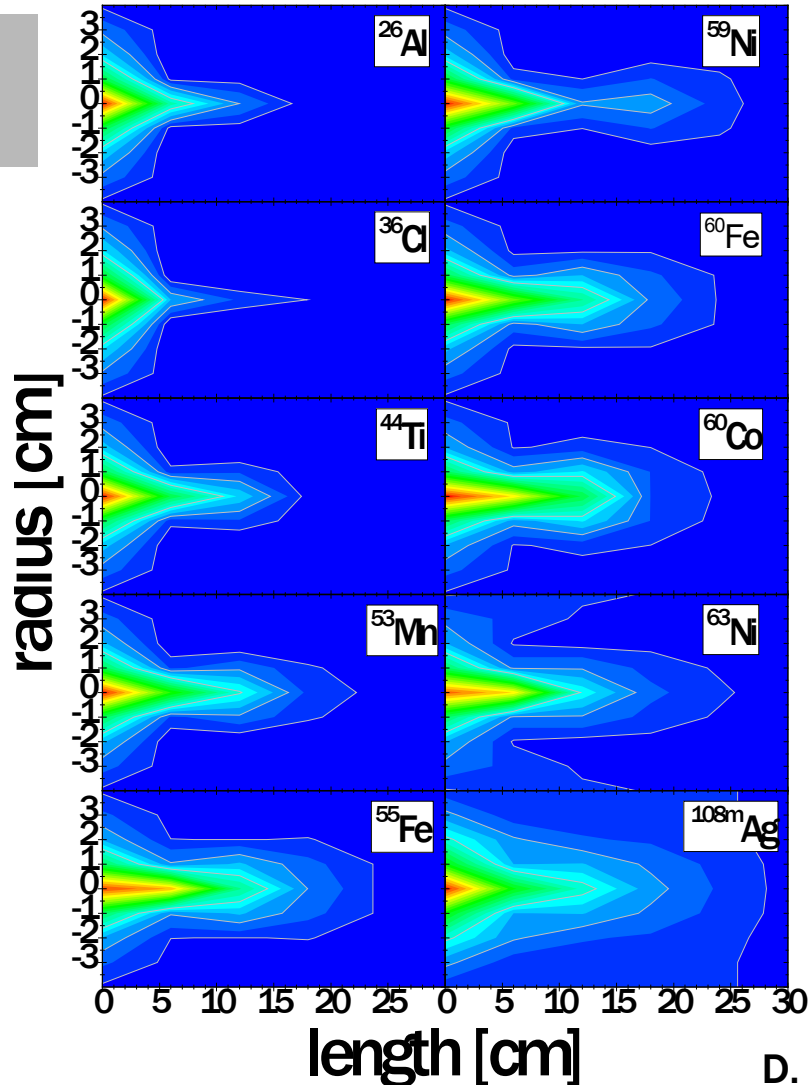

1994 dismantling of the bio-medical setup

Swiss control and licensing authority demanded a characterization including the nuclide-vector of all dismantled parts for final disposal.

# Nuclide distribution in Copper beam dump

total stored material  
about 500 g copper

radio nuclides inventory

$^{26}\text{Al}$	7 kBq	$\approx 2.3 \times 10^{17}$ atoms
$^{32}\text{Si}$	10 MBq	$\approx 7.8 \times 10^{16}$ atoms
$^{44}\text{Ti}$	100 MBq	$\approx 2.8 \times 10^{17}$ atoms
$^{53}\text{Mn}$	500 kBq	$\approx 8.4 \times 10^{19}$ atoms
$^{59}\text{Ni}$	8 MBq	$\approx 2.7 \times 10^{19}$ atoms
$^{60}\text{Fe}$	5 kBq	$\approx 5.9 \times 10^{17}$ atoms

# Experiments with $^{60}\text{Fe}$

## Half-life measurements

old adopted value

$$t_{1/2} = 1.5 \text{ My}$$

W.Kutschera, et al.:

NIM B 5 (1984) 430

new value

$$t_{1/2} = 2.62 \text{ My}$$

- G.Rugel, et al.:  
Phys. Rev. Lett. **103** (2009) 072502

- K.M.Ostdiek, et al.:  
Phys. Rev. C **95** (2017) 055809

## neutron capture cross section

- $^{60}\text{Fe}(n,\gamma)^{61}\text{Fe}$  at stellar neutron temperatures  $kT = 25 \text{ keV}$

$$\langle \sigma \rangle = 5.6 \text{ mbarn}$$

E.Uberseder, et al.:

Phys. Rev. Lett. **102** (2009) 151101

- thermal neutrons capture  
T.Heftricht, et al.:  
Phys. Rev. C **92** (2015), 015806

# The ERAWAST-project

(Exotic Radionuclides from Accelerator Waste for Science and Technology)

## Objective:

Exploitation of accelerator waste for isolating rare exotic radionuclides

## History:

- Radiochemical analytics of activated components for disposal
- Results showed high content of several rare isotopes
- Looking for potential users of these isotopes: I. ERAWAST workshop 2006 (PSI), funded by ESF
- Five-years working program
- II. ERAWAST workshop 2011 at PSI: first results and future program
- CHANDA-workshop in 2015
- ~ 20 Partners
- Member of n\_TOF

## Collaboration between

Nuclide production facilities

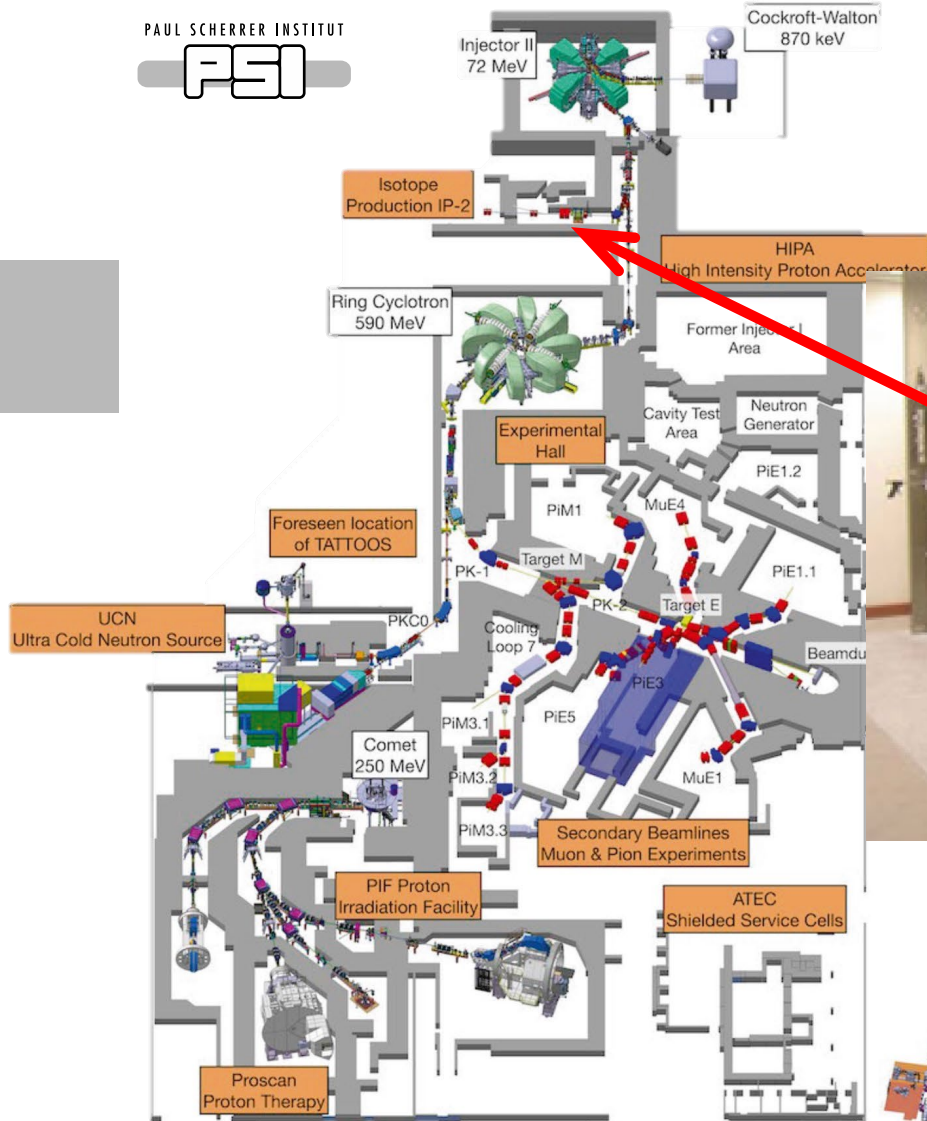

Basic nuclear physics research

Nuclear astrophysics

AMS measurement groups

Environmental chemistry

# „Useful“ Installations at PSI

# Summary and outlook

- Exotic radionuclides are produced in components of the 590 MeV proton accelerator at PSI
- After chemical separation, these isotopes are available for scientific applications
  - Nuclear astrophysics
  - Geoscience
  - Basic nuclear physics
- PSI owns a store house of several very rare isotopes, some of them being unique world-wide in quality and quantity ( ${}^7/{}^{10}\text{Be}$ ,  ${}^{32}\text{Si}$ ,  ${}^{53}\text{Mn}$ ,  ${}^{60}\text{Fe}$  and others)
- Examples for front-end experiments using our material
  - ${}^{60}\text{Fe}$  half-life and neutron capture cross section measurements
  - ${}^7\text{Be}$  in Big Bang Theory
- Half-life ( ${}^{53}\text{Mn}$ ,  ${}^{146}\text{Sm}$ ,  ${}^{32}\text{Si}$ ,  ${}^{148}\text{Gd}$ ,  ${}^{154}\text{Dy}$ ,  ${}^{157}\text{Tb}$ ,  ${}^{137}\text{La}$ ,  ${}^{93}\text{Mo}$ ) and cross section ( ${}^{44}\text{Ti}$ ,  ${}^{53}\text{Mn}$ ) measurements, most of them under the leadership of PSI completed, ongoing or planned
- **We need a dedicated mass separation device for exotic radionuclides!**

# My thanks go to

- The Isotope and Target Chemistry research group and all members of LRC
- The PSI Hotlab crew
- The PSI ATEC group
- Colleagues from the Radioprotection Division
- all colleagues using samples and targets from PSI:
  - n\_TOF and ISOLDE at CERN
  - SARAF
  - Uni Frankfurt/KIT Karlsruhe
  - ILL Grenoble
  - ANU Canberra
  - and many others

# You for your attention
