More efficient cooling

- **Targetry is the first and a crucial step** for medical radionuclide production.
- **The choice of target material and backing material** is key, as the irradiation parameters, as well as the subsequent devised chemical separation, are affected.
- **Targetry for  $^{44}\text{Sc}$ ,  $^{155}\text{Tb}$  and  $^{64}\text{Cu}$  production.**
- **Optimisation of IP2 Beam Monitor System** (beam profile and position)
