

Initiation of catalytic reactions by THz pulses and characterization of short-lived intermediate states by X-rays

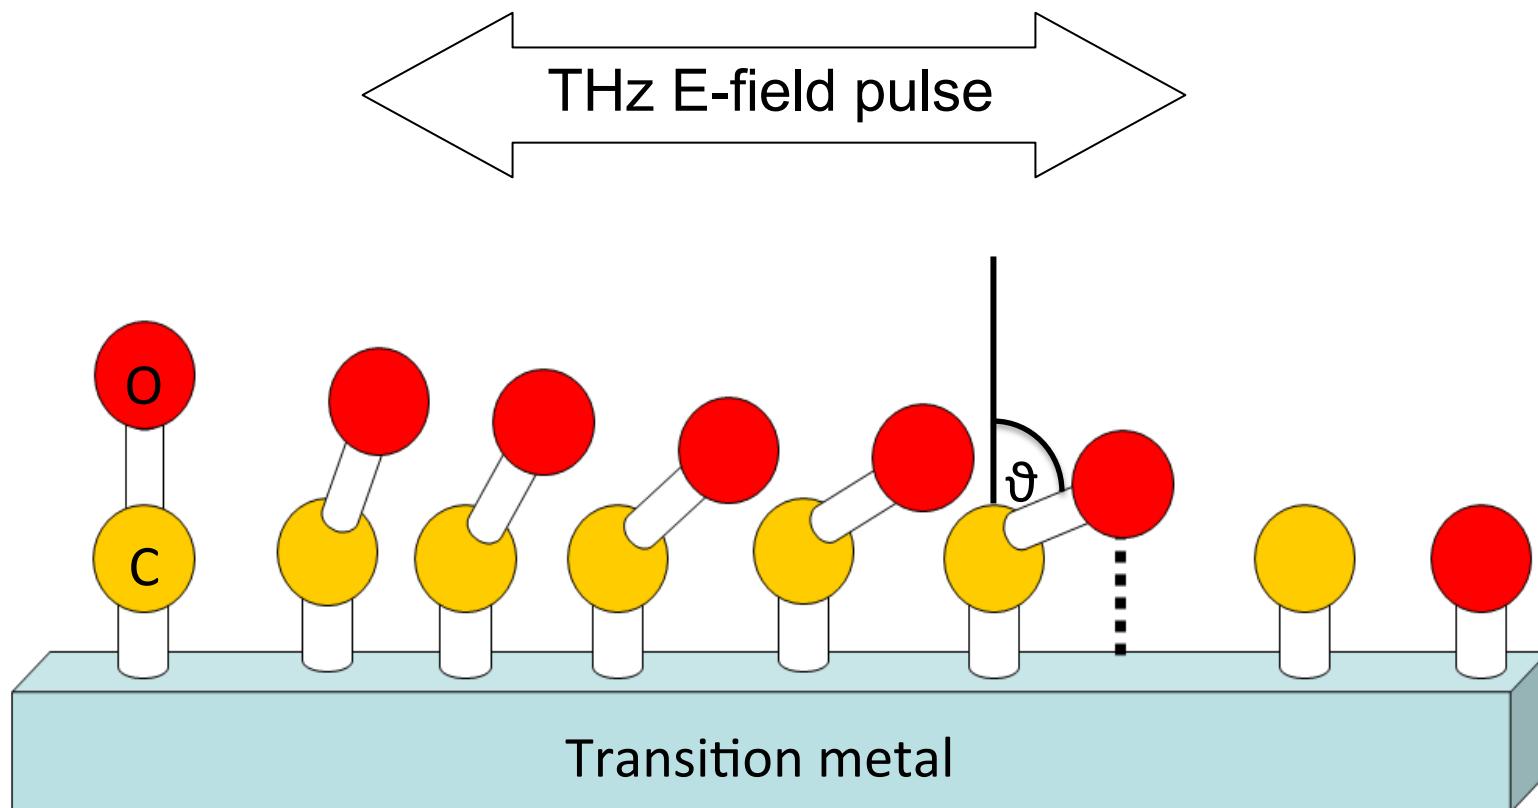

Anastasija Ichsanow

Paul Scherrer Institute, 5232 Villigen PSI, Switzerland

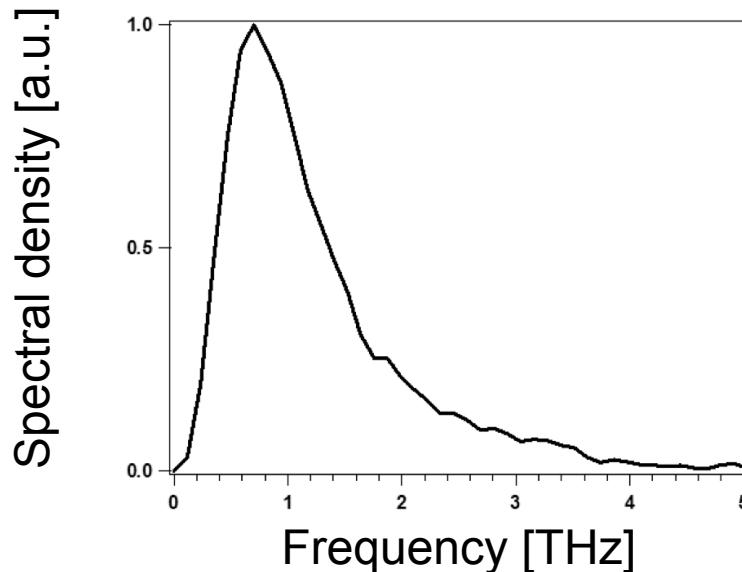

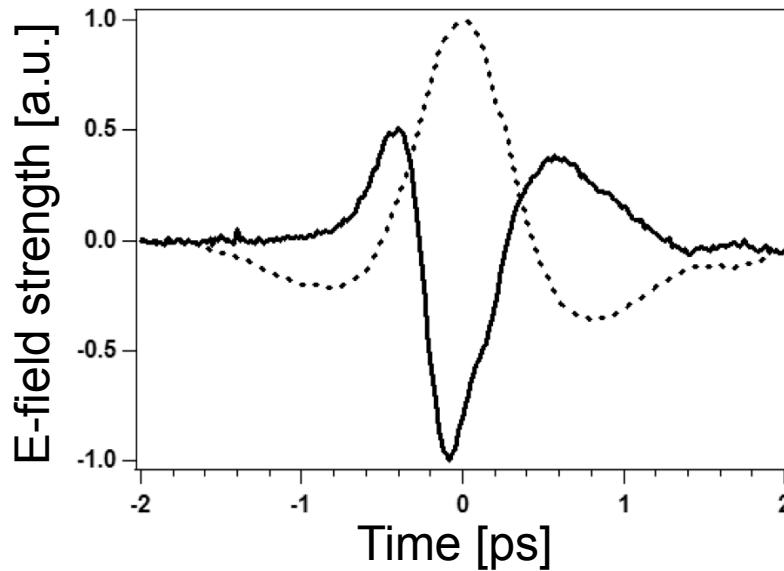

Introduction

THz-pump

THz pulse

generated by non-linear
optics in a plasma

@ PSI
> 1 MV/cm
~ 10 μ J
~ 1 mm²

Parameter table

Beam Parameters	Unit	Requirement	Remarks
Energy	keV	L3 edges of Ru, Rh, Pd + Pt, Au: (2.8-3.2 + 11.6, 11.9)	
Bandwidth	%	Dispersive mode: 0.5 Scanning mode: 0.005	
Ph/pulse stability		10%	Normalization accuracy in scanning mode: 0.01%
Pulse length	fs	200	Time resolution defined by THz pump pulse

Parameter Changes	Requirement	Remarks
Energy	Range / step 50 / 0.5 eV	In scanning mode
Pump-probe delay	Range -10 – 100 ps	

Beam geometry	Requirement	Remarks
	Dispersive single-shot spectrometer	

Other	Requirement	Remarks
THz pump source	$\frac{1}{2}$ cylce and multiple pulse trains	$E(\max) > 3 \text{ MV/cm}$
