

Data Science Services at CSCS

HPC-Forum: Data Science & Machine Learning Marcel Schoengens, CSCS May 18th 2017

Overview

- Software Services
 - Data Analytics
 - Classical Machine Learning
 - Deep Learning

- Infrastructure Services
 - Compute and Storage
 - Access Model: cscs2go

Software Services

Data Analytics

- Use case: clean-up, query, transform, apply statistics and visualize data
- Python Scientific Libraries: Pandas, Scipy, Numpy, Matplotlib
 - to use on a single node
- Apache Spark in combination with Python Scientific Libraries
 - to make use of multi-core, multi-node infrastructure
- Example
 - Analyze data from a distributed network simulation

Classical Machine Learning

- Use case: model calibration (inference) and generalized linear models
- Python Scientific Libraries: scikit-learn
 - to use on a single node
- Apache Spark ML
 - to make use of multi-core, multi-node infrastructure
- ABCpy: Library for approximate bayesian computation
 - runs in single- and multi-node mode
- Examples
 - Predict traffic in distributed networks (linear regression, SVM)
 - Infer parameters of a mechanistic social network models
 - Infer parameters of hydrological models

Deep Learning

- Use case: Train convolutional & recurrent neural networks
- Tensorflow and Theano
 - to use single node
- Examples
 - Predict treatments for patients learned from PubMed publications (NLP)
 - Detect events in high energy physics (classify event from noise)
 - Detect patterns in radio telescope images

Infrastructure Services

Compute & Storage

- Compute @ Piz Daint
 - Multicore (2 x Intel Broadwell CPU, 36 cores total)
 - Hybrid (Intel Haswell CPU, 12 cores & Nvidia P100 GPU)
 - 64 and 128 GB of main memory
- Storage
 - Home Directory, Project Storage, Data Mover
 - ~ 6PB shared Scratch storage
- Programming Environments
 - C++, Fortran, Python, ...
 - debuggers and performance tools

Access Model: cscs2go

Base Packages

	Start-up	Base	Medium	Large
# Users	1	3	5	10
Permanent Storage	1 TB	5 TB	20 TB	70 TB
Scratch Storage	~6PB shared			
Node hours	100	200	1'000	1'000
Yearly price (in CHF)	300	1'000	3'500	10'000

- Included in every package are: 10 GB of storage on /home per user,
- 12 months validity.

Additional node hours

Number of node hours	Price per node hour
500 – 4'999	CHF 1.00
5'000 – 29'999	CHF 0.80
> 30'000	CHF 0.70

All prices are for academia only

Thank you for your attention.
